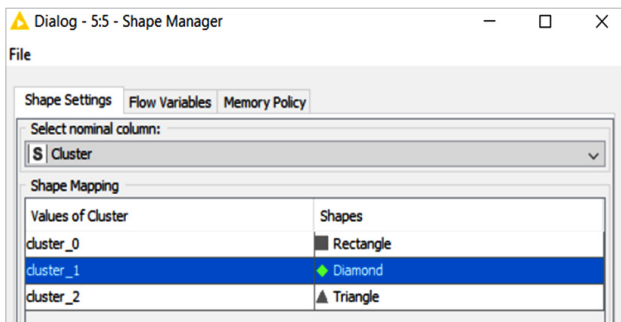

Figure 9: Configuration of shape manager node

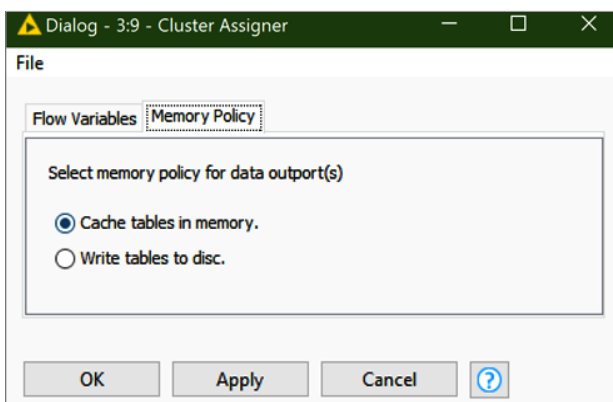

Figure 10: Configuration of cluster assigner node

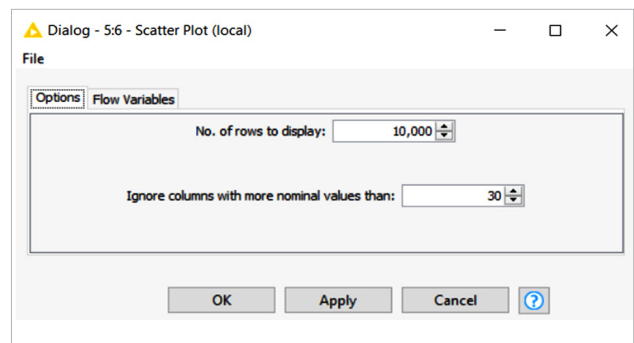

Figure 11: Configuration of scatter plot node

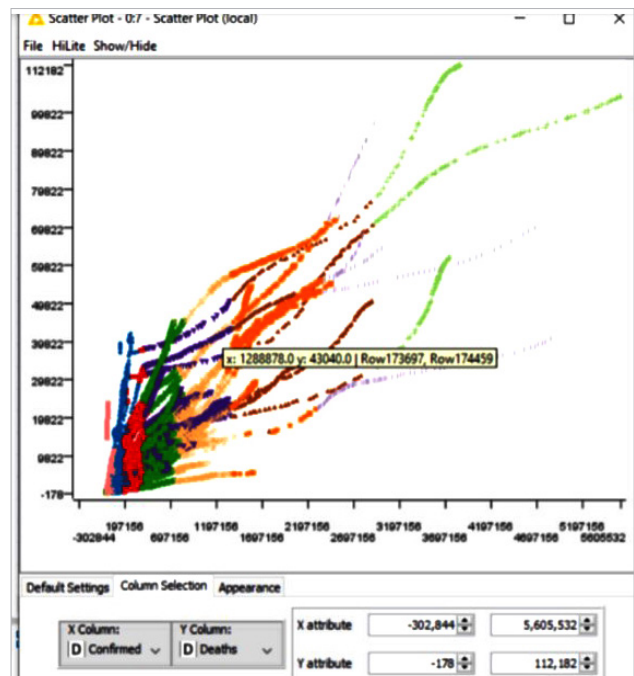

Figure 12: Visualisation output of the scatter plot for Corona virus data

data point is displayed as a dot at its corresponding place, depending on the values of the selected attributes. The dots are displayed in the colour defined by the colour manager. The size is defined by the size manager, and the shape is defined by the shape manager.

Figure 12 depicts the visualisation output of the scatter plot obtained by performing k-means clustering and unsupervised machine learning on KNIME software for the Covid 19 data set. This gives us an idea of the country's recovery rate during the pandemic. **END** 🐧
