

Figure 2: Running the exe file for installation

Figure 3: Checking the version of Git

Figure 4: Pushing the file

repository:

```
git init
```

Next, to add the file to the repo, enter the following command:

```
git add file_name
```

We now need to connect to the GitHub repository; so enter the following command:

```
git remote add origin "link to github"
```

Next, to push the file to the repo, use the command:

```
git push origin master
```

A user name and password will be asked, post which GitHub can be checked and the files can be pushed, as shown in Figures 4 and 5.

Configuring GitHub on Windows is pretty interesting. Try it out for yourself! **END** 🐧
