

Azure DevOps / MyShuttle / Pipelines / MyShuttle / 20211004.12

#20211004.12 Update azure-pipelines.yml for Azure Pipelines on MyShuttle

This run has been retained forever by master (Branch). [View retention leases](#)

Summary Tests Code Coverage **Extensions**

Code Analysis Report

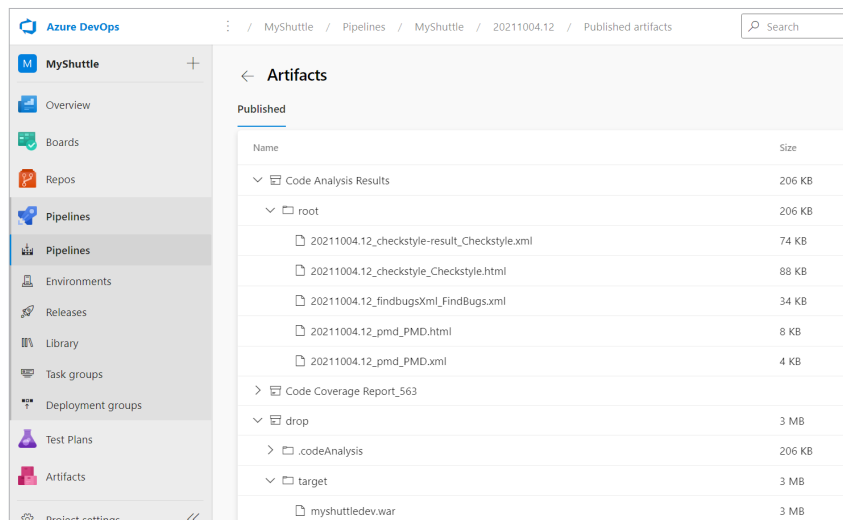

Checkstyle found 358 violations in 8 files.
FindBugs found 3 violations in 1 file.
PMD found 7 violations in 4 files.

Code analysis results can be found in the 'Artifacts' tab.

Build Quality Checks

QualityChecks
✓ Code coverage policy passed with 18.6813% (34/182 lines).

Branch policies

Branch policies are an important part of verification and validation of quality in the Git workflow, as they help to implement features or fix bugs in an isolated manner in short lived branches and not in main branches.

By: Mitesh Soni

The author has written the books 'Hands-on Azure DevOps, Agile, DevOps and Cloud Computing with Microsoft Azure', 'Hands-on Pipeline as Code with Jenkins', and 'Hands-on Pipeline as YAML with Jenkins'.

Branch policies help you to configure approvers, execute the build pipeline created in the Pipelines section, and also verify Quality Gates so that if quality is not up to the mark then changes won't be merged in the main branch.

We can also assign code reviewers automatically from the given list, which helps to enforce best practices.

We leave the discussion here, and hope the concept and sample pipeline creation will excite you to try your hands with DevOps on Azure. **END** 🐧
