

Learn the Basics of Creating Visualisations with Tableau Public

Data visualisation is the graphical representation of information and data. By using visual elements like charts, graphs, and maps, data visualisation tools provide an accessible way to see and understand trends, outliers, and patterns in data. This article explains the basic functionalities of Tableau.

In the world of Big Data, data visualisation tools and technologies are essential to analyse enormous amounts of information and make data-driven decisions. These tools provide real-time data insights in a matter of minutes. The better you can convey things visually, whether in a dashboard or a slide deck, the better you can leverage that information. Effective data visualisation is a delicate balancing act between form and function. Tableau Public users have created visualisations

on every possible topic such as music, sports and politics.

Tableau Public is a free, fast, easy to use tool for telling visual interactive stories on the Web. It has very good compatibility with different types of databases and can be connected to spreadsheets, Big Data and different types of cloud systems. The target demographic includes students, bloggers, journalists, writers, data analysts and business intelligence (BI) enthusiasts.

Installation

Out of the five products offered by Tableau, Tableau Desktop, Tableau Public and Tableau Online offer data visual creation. Tableau Public is free of cost and does not require any licence. But it comes with the limitation that all of the data and workbooks are made public to all Tableau users. Tableau Public is essentially a free version of Tableau visualisation software. It allows you to use most of the software functions. You can create visualisations

	Desktop		Reader	Server	Public	Online
	Personal	Professional				
Details	- Local client for building dashboards - Limited data sources, no ability to connect to Tableau Server	- Local client for building dashboards - Full enterprise capabilities	- Local client to view and interact with local files - Unable to modify workbooks or connect to server	- Privately managed Tableau Server (may be on premise or service hosted) - Users may directly interact with dashboards via browser	- Essentially a massive, public non-commercial Tableau server - All data published is public - Free client available to create dashboards	- Private version of eliminates Public eliminates need for infrastructure - Live connections currently only possible with Google BigQuery and Amazon Redshift
OS					N/A	N/A
License	\$999	\$1,999	Free	Name User or Core Licensing	Free	\$500/user per year
