

You can further extend a form by creating a drop-down list by using the *choices* option. This will come in handy when you have multiple words or sentences that you wish to use in your text:

```
- trigger: ":form"
  form: |
    {{choices}}
  form_fields:
    choices:
      type: choice
      values:
        - IST
        - PST
```

So now when you type `:form`, a small window will come up, where you can choose from the drop-down box as per your need.

If you prefer *lists* over the *choices* option, then you can modify the above code as follows:

```
- trigger: ":time_zone"
  form: |
```

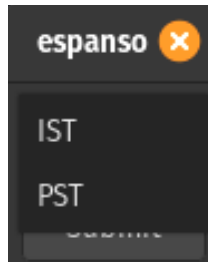

Figure 2: Espanso form

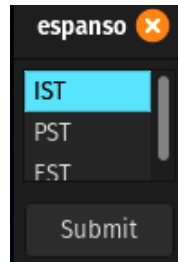

Figure 3: Espanso list

```
{{choices}}
form_fields:
  choices:
    type: list
    values:
      - IST
      - PST
      - EST
```

Packages

Espanso capabilities can be extended by adding a package using the following command:

```
$ espanso install package_name
```

This will fetch the requested package from the Espanso hub and install it on your system; after that you need to restart the Espanso service by using the command:

```
$ espanso restart
```

To uninstall a package, enter the following command in the terminal:

```
$ espanso uninstall package_name
```

Espanso is a very useful tool for working with a lot of text. One can easily reduce all the repetitive work currently being done. But it is still a work in progress and has many promising features in store. **END** 🐧
