

Platform	Platform version and solution stack name
Docker	◆ Docker AL2 version 3.4.5 • 64-bit Amazon Linux 2 v3.4.5 running Docker
Java SE	◆ Corretto 11 version 3.2.5 • 64-bit Amazon Linux 2 v3.2.5 running Corretto 11 ◆ Corretto 8 version 3.2.5 • 64-bit Amazon Linux 2 v3.2.5 running Corretto 8
Tomcat	◆ Corretto 11 with Tomcat 8.5 AL2 version 4.2.5 • 64-bit Amazon Linux 2 v4.2.5 running Tomcat 8.5 Corretto 11 ◆ Corretto 8 with Tomcat 8.5 AL2 version 4.2.5 • 64-bit Amazon Linux 2 v4.2.5 running Tomcat 8.5 Corretto 8
Go	◆ Go 1 AL2 version 3.4.0 • 64-bit Amazon Linux 2 v3.4.0 running Go 1
.NET Core on Linux	◆ .NET Core on AL2 version 2.2.5 ◆ 64-bit Amazon Linux 2 v2.2.5 running .NET Core
.NET on Windows Server	◆ Windows Server 2019 with IIS 10.0 version 2.7.0 ◆ Windows Server Core 2019 with IIS 10.0 version 2.7.0 ◆ Windows Server 2016 with IIS 10.0 version 2.7.0 ◆ Windows Server Core 2016 with IIS 10.0 version 2.7.0 ◆ Windows Server 2012 R2 with IIS 8.5 version 2.7.0 ◆ Windows Server 2012 R2 Server Core with IIS 8.5 version 2.7.0
Node.js	◆ Node.js 14 AL2 version 5.4.5 • 64-bit Amazon Linux 2 v5.4.5 running Node.js 14 ◆ Node.js 12 AL2 version 5.4.5 • 64-bit Amazon Linux 2 v5.4.5 running Node.js 12
Python	◆ Python 3.8 AL2 version 3.3.5 • 64-bit Amazon Linux 2 v3.3.5 running Python 3.8 ◆ Python 3.7 AL2 version 3.3.5 • 64-bit Amazon Linux 2 v3.3.5 running Python 3.7
PHP	◆ PHP 8.0 AL2 version 3.3.5 • 64-bit Amazon Linux 2 v3.3.5 running PHP 8.0 ◆ PHP 7.4 AL2 version 3.3.5 • 64-bit Amazon Linux 2 v3.3.5 running PHP 7.4
Ruby	◆ Ruby 2.6 AL2 version 3.3.5 • 64-bit Amazon Linux 2 v3.3.5 running Ruby 2.6

Table 2: Platform versions supported in AWS Elastic Beanstalk

Table 2 lists the platform versions that are supported in AWS Elastic Beanstalk.

How it works

Here are the steps needed to create and manage applications in AWS Elastic Beanstalk:

1. Create an application.
2. Upload an application version `.jar` or `.war` file for Java.
3. Provide details about the application.
4. The environment is launched.
5. Manage the environment from the Elastic Beanstalk console.

Application deployment on AWS Elastic Beanstalk

Sign in to the AWS Management Console with your IAM credentials. Click on *Services* and select the *Elastic Beanstalk* console. If you have never used Elastic Beanstalk service, you will get a *Welcome* page to AWS Elastic Beanstalk.

Click on *Create Application*, as shown in Figure 1.

You will get two options — *Web server environment* and *Worker environment*. Click on the former, as shown in Figure 2.
