Elastic Beanstalk > Create environment

Create a web server environment

Launch an environment with a sample application or your own code. By creating an environment, you allow Amazon Elastic Beanstalk to manage Amazon Web Services resources and permissions on your behalf. [Learn more](#)

Application information

Application name
petclinic
Up to 100 Unicode characters, not including forward slash (/).

Application tags (optional)

Apply up to 50 tags. You can use tags to group and filter your resources. A tag is a key-value pair. The key must be unique within the resource and is case-sensitive. [Learn more](#)

Create a web server environment

Launch an environment with a sample application or your own code. By creating an environment, you allow Amazon Elastic Beanstalk to manage Amazon Web Services resources and permissions on your behalf. [Learn more](#)

Platform

☒ Managed platform
Platforms published and maintained by Amazon Elastic Beanstalk. [Learn more](#)

☐ Custom platform
Platforms created and owned by you.

Platform
Tomcat

Platform branch
Tomcat 8.5 with Java 8 running on 64bit Amazon Linux

Figure 4: Tomcat platform

Next, you need to provide the application name and tags, as shown in Figure 3.

After providing the name, select

the platform and platform branch.

Now we need to upload the application package (Figure 5).

It's now time to review all the settings and launch the environment.

Wait for some time until the environment is created, and you will be redirected to the environment page where the application health is given. Note the URL; you will need it to check
