

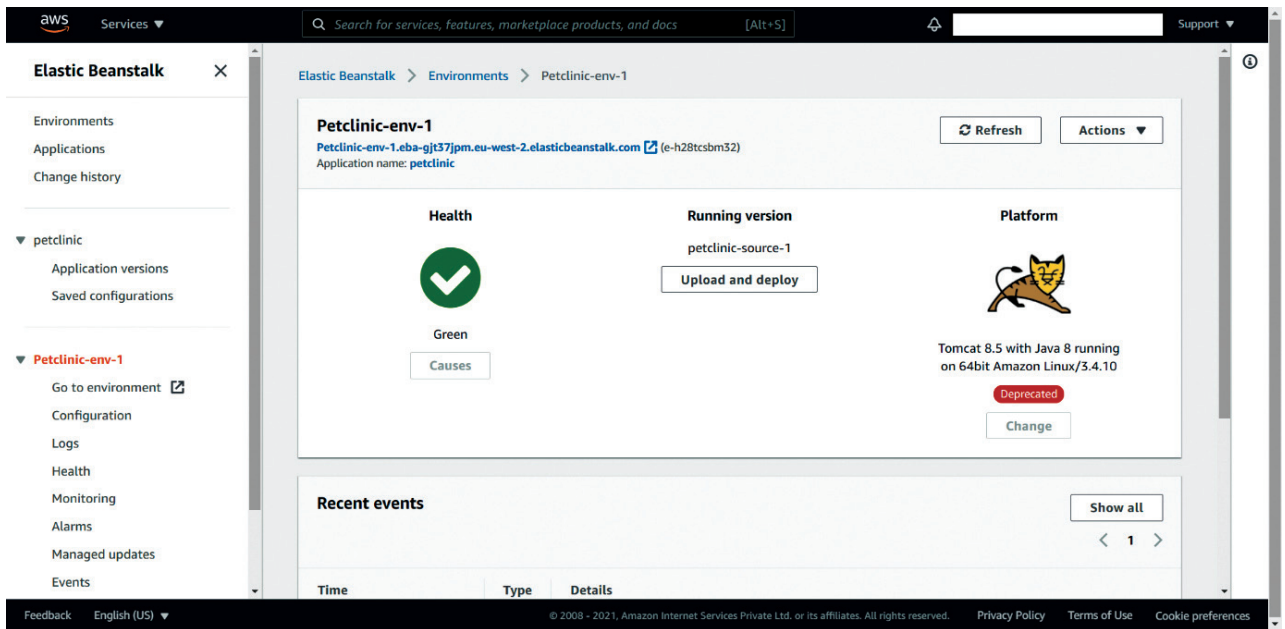

Figure 7: Application health

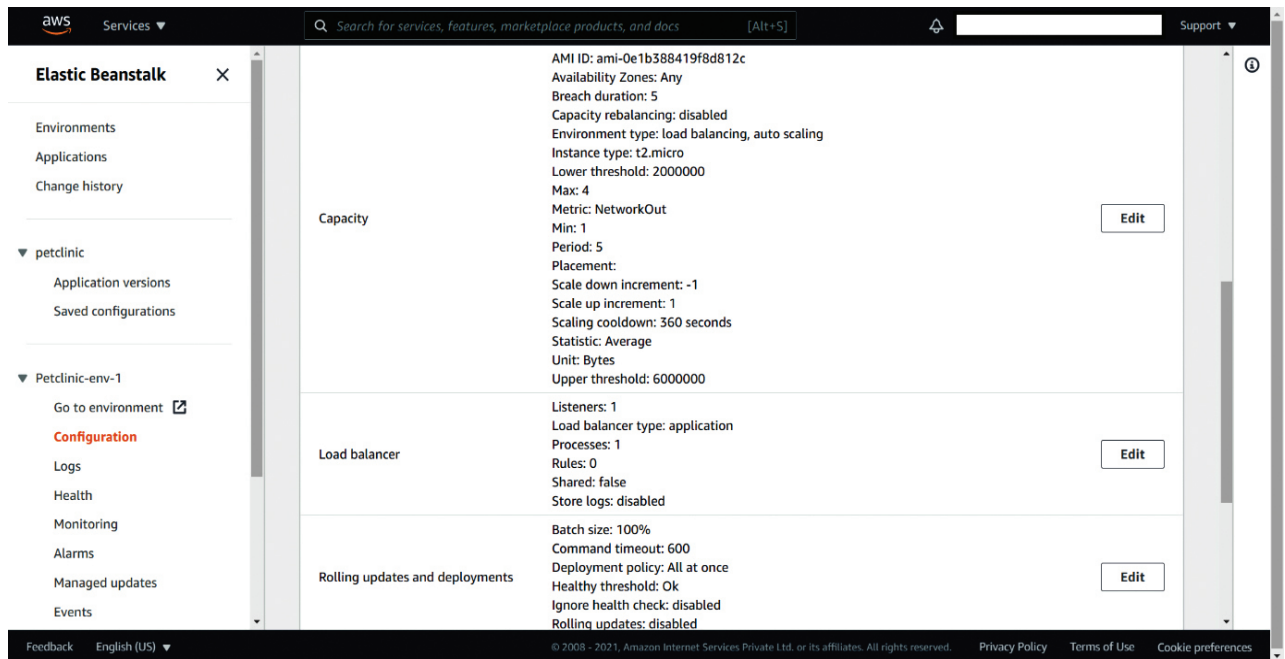

Figure 8: Application configuration -- capacity

the application home page.

Click on *Environment configuration* and verify the capacity as well as the load balancer related details (Figure 8).

Go to the *Monitoring* section and verify the different parameters

available to monitor the existing application such as target response time and total requests.

Visit the URL available on the environment page, and you can see the application home page in your browser.

There is no extra charge for using AWS Elastic Beanstalk. You just need to pay for AWS resources such as Amazon S3 buckets and Amazon EC2 instances that are created to store and run Web applications. Give it a try to see how it works. **END** 🐧
