

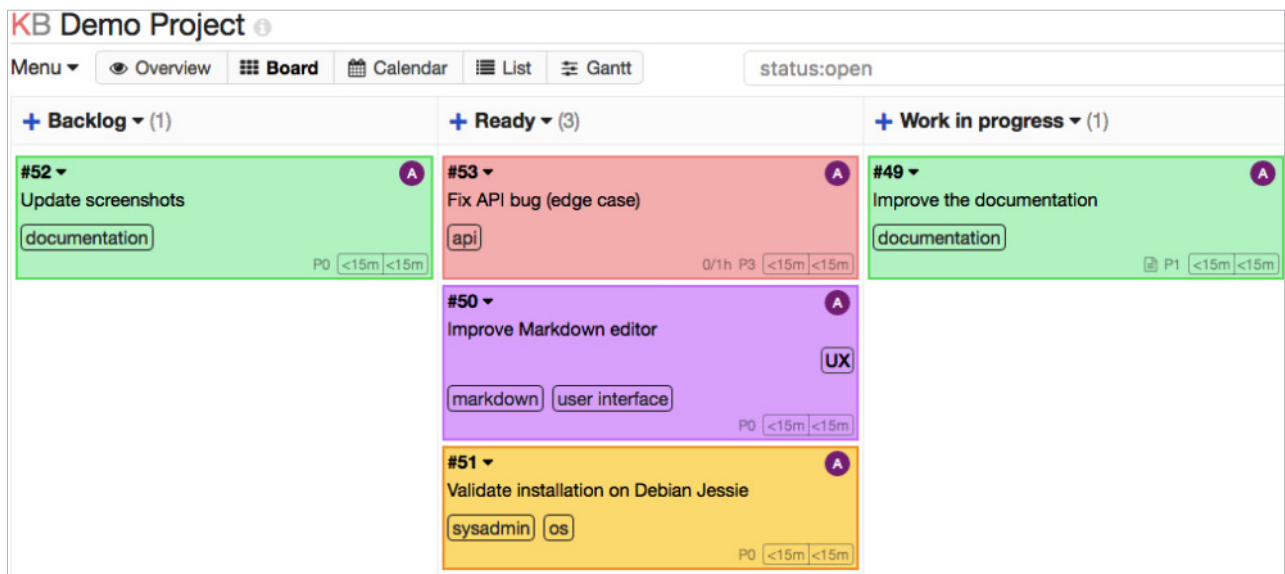

Figure 2: Kanboard

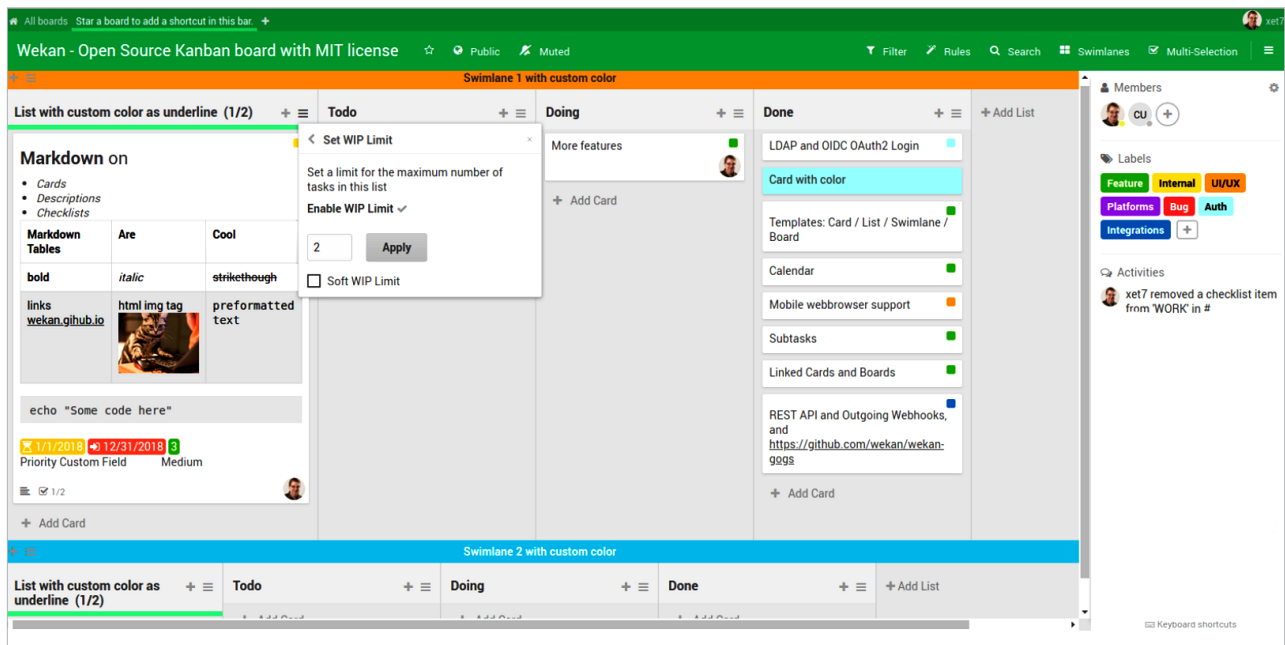

Figure 3: Wekan Kanban board

A lightweight and simple user interface: Kanboard developers follow an approach of voluntarily limiting the number of features so that its operation is simple and users do not get overwhelmed. There is no fancy user interface, and the focus is on simplicity and minimalism. The developers claim: “It’s very easy to understand, there is nothing to explain and no training is

required.” To make it easier for users, Kanboard supports automated actions for repetitive tasks based on events.

Wekan: Feature-rich and more Trello-like

Trello is the most popular among the commercial Kanban tools. Among the open source Kanban tools, Wekan closely resembles Trello. Wekan also has the capability to import a board from Trello.

In early 2020, Wekan conducted a survey of the organisations that use its software, and 155 organisations across Europe, America and Asia responded. Their user base ranged from 1 to 800. So it appears that Wekan can scale to very large teams.

Wekan progressive Web app (PWA) in Android and Apple phones: Wekan has support for PWA. Even though this is a Web application, when viewed through a browser, it feels like an app to the user
