No activities				

Last activities

ID	Computer name	Action	Details	Starting time	Required time	Used Storage
5	D9Frost	Full image backup	Volume: E:	08/08/21 11:50	2 min	26.8 MB
1	D9Frost	Full file backup	-	08/08/21 11:48	1 min	21.25 MB

Figure 8: Recent complete activities

indexing gets completed. The indexing can take a while (depending upon how much data you've got to back up).

Note: Different colours of the UrBackup client icon inform users about the status of the backup. This can be checked by clicking on the Windows tray icon:

- Red – not connected
- Yellow – backup running
- Green – backup completed recently

- After indexing gets completed, the full image and file backup starts automatically. Now you just need to wait for it to complete. After the backup is completed, the status on the client will change to *idle* and you can check your server status under your client name. If a successful backup is created, then it will display 'ok' under file backup status and the image backup status.

- Now, check your *backups* folder on your Windows server. Backup has been saved under your client name folder. In my case, the client PC name is 'D9Frost'. I have completely backed up Drive E, and you can see the folder 'agile' which was present in Drive E in my client machine has been backed up (Figure 7).
- By accessing your Web interface, you can also get the information on your recent backups and logs, as well as statistics about storage information (Figure 8). Congratulations! You now have a very simple, reliable Internet backup system up and running. **END** 🐧
