

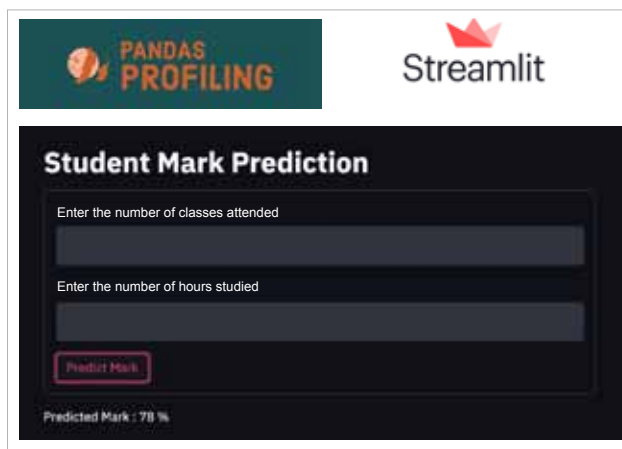

Figure 1: Output

Now, let's build a Web app with two input boxes for the users to provide 'No. of hours studied' and 'No. of classes attended', and a button to predict the marks of a student. The code is given below:

```
import streamlit
import pandas
st.title("Predict Student Marks")
#Lets create a form
```

```
Form = st.form(key='marks_form')
Form.text_input(label="Enter the number of classes attended")
Form.text_input(label="Enter the number of Hours studied")
Submit = form.form_submit_button('Submit')
```

```
If submit_button:
#load your pickle file or h5 model file
#predict output with the above input
St.markdown("Predicted Mark :" + Mark + "%")
To run the streamlit web app,
Streamlit run <filename>
```

The output of the above program is shown in Figure 1.

This is a small example that shows how to create an ML Web app using Streamlit. You can explore this library in detail at <https://streamlit.io/>. **END** 🐧
