

Mozilla Firefox 36 to support the HTTP/2 protocol

Mozilla has decided to support the HTTP/2 protocol in its upcoming Firefox 36.0. The technology has been finalised as the next-generation HTTP (Hypertext Transfer Protocol) network protocol. The Internet will adopt the new protocol in the near future. Mozilla had proposed to use HTTP/2.0 in upcoming Firefox releases a few weeks ago. The decision was finalised on February 17.

OpenLiteSpeed Web server has decided to support HTTP/2 draft 16. Even Microsoft IIS Web server will support the HTTP/2 protocol in upcoming Windows 10 OS. We can expect more and more technologies to adopt the HTTP/2 protocol in the coming months.

Mozilla Firefox 36.0 adds many innovative features to the browser like the pinned tiles sync function. The native HTML5 YouTube playback will be a much appreciated feature in the new browser. A newly designed *Preferences* interface is enabled in the new browser. The flash protected-mode sandbox is disabled on Windows to evaluate the stability impact of protected mode.

Firefox will no longer accept the insecure RC4 ciphers, whenever possible. The support for ECMAScript 6 symbol data type has been added to the new version. Mozilla has implemented Unicode range CSS descriptor in the new browser version. Users can create a new stacking context to isolate groups of boxes, to control which to blend together in Firefox 36.0. You can expect more privacy features in this version of Firefox than ever before.

The major addition of full support for HTTP/2.0 protocol enables a faster, more capable and more responsible Web browsing experience.

32-bit browsers are recommended to be 512MB and this can reach up to 2GB in the 64-bit browser.

The post, which refers to a game built by Epic Games' Unreal Engine, adds, "For some of the largest of these apps, a 64-bit browser means the difference between whether or not a game will run." Mozilla launched Firefox Developer Edition in November last year, and the company has offered 64-bit versions of Firefox for Mac OS X and Linux since a long time. But it's only now that it's introduced this on the Windows platform too.

Firefox 36 for Android has also included HTTP/2 support, just like its desktop counterpart. With the new protocol, pages can be loaded faster than before and the connections are longer lived too. The user interface is also completely revamped and more features are expected to be added in future. Firefox 36 for Android tablets has also added a full screen tab panel and a new search system. The new Android version also introduces the Maithili locale for Android Lollipop users, a number of changes in HTML codes for developers and several fixes in VPNs.

Arch Linux 2015.03.01 released with Linux kernel 3.18.6

A brand new ISO image has been released for the lightweight, highly customisable and powerful Arch Linux computer operating system. The new release is meant for those who want to deploy the acclaimed distro on new computers.

In the Arch Linux distro, on the first day of each month, a new ISO image is released

and March 1 was no exception. A new ISO image includes all the updates released during the previous month, including the core of the OS, the Linux kernel.

Arch Linux 2015.03.01 is powered by Linux kernel 3.18.6, and it includes all the updates that were released on the software repository of the distribution throughout February 2015. It also includes all the improvements, new packages and bug fixes.

If you are already using Arch Linux, then you don't need to download the new ISO image to keep your system updated as Arch Linux is a rolling-release distribution. The latest version can be installed on both 64- and 32-bit computer systems.

LibreOffice 4.4.1 released with more than 100 fixes

The Document Foundation has announced the first maintenance release of the stable LibreOffice 4.4, which is an open source and multi-platform suite. The new updated release is available for download too. LibreOffice 4.4.1 introduces some minor fixes so that the office suite stays stable and dependable on all platforms.

According to the official announcement, LibreOffice 4.4.1 fixes more than 100 bugs, which were discovered by developers as well as users in the previous release, LibreOffice 4.4 'Fresh'. This was announced at the end of January 2015, and it was said to be the most beautiful LibreOffice ever.
