12. The plugins being installed will be displayed.

Click on *Continue* after all the plugins have been installed.

13. Enter the details of the admin user. Then click on *Update profile*.

14. Enter the site name and other details, and click on *Save changes*.

Moodle has been installed successfully. You can now create categories and courses on the site.

Moodle comes with a set of default features such as assignments, files, forums, quizzes. To add more features, you can download plugins from <https://moodle.org/plugins/> and install them on your site.  **END**

8. Enter the path of the data directory, that is, the *moodledata* directory (*/var/www/moodledata*).
9. Select *Improved MySQL* as the database driver and click on *Next*.
10. Read the copyright notice and click on *Continue*.
11. In the *Server checks* page, if the status of any PHP extension is 'Not OK', enable the appropriate PHP extension. The configuration for PHP can be found in the *php.ini* file (*/etc/php5/apache2/php.ini*). Click on *Continue*.
