

To get started, add **HTML5 DOCTYPE**. Bootstrap uses HTML5 elements and CSS properties, which require HTML5 **DOCTYPE** at the beginning of the page.

```
<!DOCTYPE html>
<html lang="en">
Defining <head>:
```

To build a responsive, mobile first Web page and to ensure proper rendering in any device, add the following link:

```
<meta name="viewport" content="width=device-width, initial-
scale=1">
```

The next step is to add relevant style sheets and JavaScript files to the head section, as follows:

```
<link href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.2/css/
bootstrap.min.css" rel="stylesheet">
<link rel="stylesheet" type="text/css" href="CSS/custom.css">
<link rel="stylesheet" href="http://maxcdn.bootstrapcdn.com/
bootstrap/3.3.2/css/bootstrap-theme.min.css">
<link href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.2/css/
bootstrap.min.css" rel="stylesheet">
<script src="https://ajax.googleapis.com/ajax/libs/jquery/1.11.1/
jquery.min.js"></script>
<script src="http://maxcdn.bootstrapcdn.com/bootstrap/3.3.2/js/
bootstrap.min.js"></script>
```

Let's begin with the **<Body>** section.

We need to first define a fixed navigation bar at the top of the Web page:

```
<nav class="navbar navbar-default"> <!-- This will be fixed at the
top -->
<div class="container"> <!-- see everything as container -->
<div class="navbar-header">
<button type="button" class="navbar-toggle collapsed" data-
toggle="collapse" data-target="#navbar" aria-expanded="false"
aria-controls="navbar">
<span class="sr-only">Toggle navigation</span></button>
<a class="navbar-brand" href="#">Home</a>
<h4><em><strong>Leisurely Getaways</strong></em></h4></a>
</div>
<div id="navbar" class="navbar-collapse collapse">
<form class="navbar-form navbar-right">
<div class="form-group">
<input type="text" placeholder="Email" class="form-control"></
div>
<div class="form-group">
<input type="password" placeholder="Password" class="form-
control"></div>
<button type="submit" class="btn btn-success">Sign in</button>
<button type="submit" class="btn btn-success">Register</button>
```

```
</form>
</div><!-- .navbar-collapse -->
</div> <!-- container closed -->
```

Adding the **navbar-brand** class gives the Web page's name. Following that, there is the **form-group** div containing the placeholder for the username and password, followed by two form elements—**Sign In** and **Register**, which can be used to navigate to the required pages.

Now, let us add a slide show of pictures as the background for our Web page. The Bootstrap carousel is an interactive slider that is both responsive and flexible enough to contain not just pictures but videos, divs, frames, etc. The code for the carousel is divided into three parts. The first part, which is the 'DOT indicators', aims at displaying simple dots in the bottom centre of the images or the content to be displayed. These are meant for manual sliding across the different slides. The second part contains the actual content in the form of div elements. In our case, we have collected a few images that will be shifting around in the background. The last part contains the controls in the form of left and right arrows, also meant for the user to slide across the content.

```
<div id="myCarousel" class="carousel container slide">
<ol class="carousel-indicators"> <!-- Dot Indicators -->
<li data-target="#myCarousel" data-slide-to="0"></li>
<li data-target="#myCarousel" data-slide-to="1"
class="active"></li>
<li data-target="#myCarousel" data-slide-to="2"></li></ol>
<div class="carousel-inner"> <!-- slides -->
<div class="item"></
div>
<div class="active item"></div>
<div class="item"></
div></div>
<!-- Slide Navigation -->
<a class="left carousel-control" href="#carousel-example-generic"
role="button" data-slide="prev">
<span class="glyphicon glyphicon-chevron-left" aria-
hidden="true"></span>
<span class="sr-only">Previous</span></a>
<a class="right carousel-control" href="#carousel-example-
generic" role="button" data-slide="next">
<span class="glyphicon glyphicon-chevron-right" aria-
hidden="true"></span>
<span class="sr-only">Next</span></a></div>
```

Bootstrap offers multiple ways of customising the way the carousel is rendered on the browser.

The small JavaScript code snippet shown below makes the carousel more interactive:

```
<!-- JavaScript to set interval timing for images-->
```
