

to install Selenium IDE or not. Click the *Allow* button.

- Firefox will automatically install the Selenium IDE software. After completing the installation, it will show one pop-up that states the Selenium IDE installation has been completed. Now restart the browser to use Selenium IDE. Click the *Restart Now* button.
- Firefox will restart automatically. Now click on the *Tools* menu list displayed on top to see the *Selenium IDE* option as shown in Figure 4.
- Click on the *Selenium IDE* option. This will launch the Selenium IDE software window.

This is the screen for Selenium IDE, where tests can be recorded, replayed and edited.

Creating the first test script using Selenium

We will be creating a test for clicking on the *Search* option to open the *Search* page in the *Clean-clouds.com* application.

- Open the Selenium IDE tool and enter the link for the application that is to be tested as shown in Figure 6.
- To open any link for the application that is to be tested, use the *Open* command and specify the link in the target value.

- Click on the *Search* option, write a new command and specify the ID of the target in the target value. This ID can be obtained with the help of Firebug, by clicking on a particular target, which is the *Search* option in this case.
- After specifying every command, the screen will look like what's shown in Figure 6.

This is how a test case can be created using the Selenium IDE.
