

Creating an Awesome Web Experience with Drupal

Drupal offers developers quick fix solutions for an instant website. However, it is not child's play. It powers many critical websites including those of the POTUS (President of the United States), Warner Music, NBC, etc. This in-depth article takes the reader through the steps to create and operate a Drupal website.

Drupal is an open source content management platform that powers millions of websites and applications. It is built, used and supported by an active and diverse community of people around the world (website: www.drupal.org).

Drupal is a PHP based Web content management system (CMS), which is distributed under the GNU-GPL license, making it free and open source software that is used to power millions of sites on the World Wide Web. Drupal was originally created by Dries Buytaert as a message board project, and was released as an open source project in 2001. It is now continuously fuelled by contributions from a huge community of around 39,000 users. It is used by organisations large and small, across various verticals like healthcare, retail, government, consumer, media and entertainment, life sciences and many more.

Some sample sites

One really famous Drupal site is whitehouse.gov. The Warner
