

Figure 5: Front page

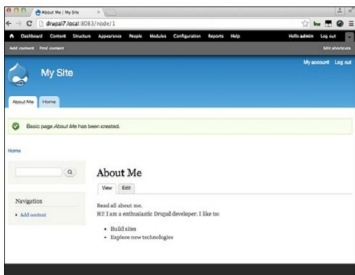

Figure 7: 'About me' page that has been created

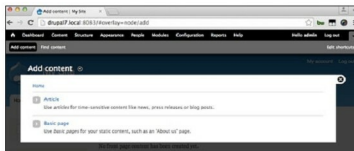

Figure 6: Content type list

`settings.php` to the same location as `settings.php` and make sure that the file permissions are such that the Apache Web server can write into this file for now. Make sure that you have both the files in the directory, `default.settings.php` and the newly created `settings.php`.

Within this `sites/default` directory, create another directory named `files`. Make sure this directory can be written to by the Web server too. Any file uploaded to the Drupal site or any JavaScript or CSS aggregated files will be stored in here.

Running the installation script

Now get on to your browser and visit this Base URL or the domain set on your virtual host as shown Figure 2, to begin installing Drupal. You should be seeing the page shown in Figure 3.

Select the *Standard installation* profile and click on *Save & Continue*. The next page should show you a list of languages available to install Drupal in. Since we have not added any support for additional languages, it will, for the time being, just show 'English'. Click on *Save & Continue* to proceed.

It next checks for the prerequisites for the Web server, PHP version, PHP settings, permission to write into the `settings.php` file and the files directory. In case there is any issue with any of these aspects, an appropriate message will be displayed. Use corrective measures as suggested by the message and then retry the same step.

Database configuration

Remember the database you had created earlier? Now, fill in the details like the database's name, user name and password as shown in Figure 4. In case your database is on a non-standard port or on a different machine, update the database server details accordingly.

If all the previous steps went fine, you should now see a screen that displays all the Drupal modules and components being installed, the database being set up and necessary settings being saved.

Site information

Now this is where you add your site's name, slogan and create an administrative user number 1. Don't forget to set the country, time zone and to make sure you enable *Check for updates automatically*.

Congratulations! Your site is up. Let's go visit it.

Front page

Figure 5 shows the front or home page of your site. It shows your site's name at the top, with the user menu on the right side, a navigation menu, some blocks on the left hand side and an admin menu on top.
