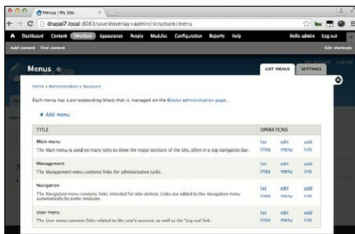

Figure 12: List of menus

Admin dashboard

The administration section will be visible to you as you are currently logged into the site as an administrator. Notice a black coloured menu on top that presents a list of links for all administrative tasks. Click on the one that says *Dashboard*.

Let's create the 'About Me' page

Now let us quickly create an 'About Me' page. From the top admin menu, click on *Add Content*. This gives you a list of choices like those shown in Figure 6.

Click on *Basic Page*. This will now open up a form for you to add content to. Add the page title as 'About Me' and in the *Body* field, add any HTML that you desire to be part of your content -- something like what's shown below:

```
<h2>Read all about me.</h2>
<p>Hi! I am an enthusiastic Drupal developer. I like to:</p>
<ul>
  <li>Build sites</li>
  <li>Explore new technologies</li>
</ul>
```

Now, let's add a menu link, from where this page will be accessible. Scroll down the form and check the checkbox in the *Menu* settings section that says *Provide*

a *menu link*. This will prompt you to add the *Menu link* title, indicating which menu you want it on. Add details as shown in Figure 8 and save them.

Now, when you save the form, the page content gets saved and is displayed to you. You can also see a menu link on top that reads 'About me' and the links to this page that you have created. Congratulations! You have created your first ever Drupal page.

Let us now create a few articles in the same way. To create a new article, go to the same *Add content* link and choose the content type as *Article*. In the form, you will notice that we now have an extra field to upload an image and one to categorise your article using tags. Go ahead and add a few articles with images along with this tag information.

Now take a look at the front page; it shows a list of all the articles that you added just now.

A few Drupal basics

We will now discuss the internal structure of Drupal and a few key concepts.

Content and content types

Everything in Drupal revolves around content, which could be a static Web page, an article, a blog post, product
