

Some of the other apps that work with Orbot are:

- Chat Secure
- Orweb
- Duck Duck Go
- Mozilla Firefox

When you are done with configuration, you are now ready to run the app. There is an icon of an onion on the notification area to indicate that Orbot is running.

You can check if Orbot is properly configured by using the 'Check browser' option. If your device is successfully configured, a Web page will show that the browser is configured to use TOR.

OSMAND~

OSMAND~ is the acronym for OSM Automated Navigation Directions, which is an Android app for offline map and navigation purposes. OSMAND~ relies on OSM (Open Street Map—a huge collection of offline maps that was contributed by users around the globe) for data.

To begin, you need to download the maps according to your preference. These maps often get updated so you can have more precise details about your location. All these maps

are stored in the memory card for offline use.

OSMAND~ provides turn-by-turn voice guidance, optional lane guidance, street name display and estimated time of arrival.

Note Cipher

Note Cipher is a simple note-taking app that employs the industry standard 256-bit AES encryption.

After installing the app, you will be asked for your password, which once set cannot be changed.

Once the app is unlocked, it will show the unlocked icon on the notification, but it will be automatically locked if the app is idle for a few minutes. It will never store data in an unencrypted state.

You can share your notes with others just by clicking the 'Share' icon on the interface.
