

perform a bulk upgrade of everything, which happens on Ubuntu. Instead, Linux Mint devs have implemented tiers - five of them, to be precise - and the user can decide exactly what to get.

"Upgrading to 17.2 will upgrade to Rafaela of course, but also apply all Level 1 updates for you. You do not need to apply Level 2, 3, 4 or 5 updates to upgrade to the new version of Linux Mint, and doing so won't apply these for you. Level 4 and 5 updates are not recommended unless they bring solutions to issues you're facing. Level 3 updates should be applied selectively and with precautions," an announcement cautioned.

AMD Catalyst 15.7 stable Linux driver released after a long radio silence

The AMD developers have announced that a new Catalyst Linux driver, 15.7, has been released and is now available for download. This version of the AMD Catalyst Linux Proprietary Graphics Driver is designed to support the following Linux distributions:

- Red Hat Enterprise Linux Suite 7.1, 7.0, 6.6 and 6.5
- Ubuntu 12.04.4 LTS, 14.04.2 and 15.04
- SUSE Linux Enterprise 11 SP3 and 12
- OpenSUSE 13

The new features included in the latest release are:

- AMD PowerXpress support for laptops equipped with Intel 6th generation (Skylake) CPUs
- Linux Platform Atomics and SVM fine grained buffer support for Carrizo APUs
- Multi-device support for OpenCL 2.0

The release note states that before attempting to install the AMD Catalyst Proprietary Linux Graphics Driver, the following software must be installed:

- Xorg/Xserver 7.4 and above (up to 1.17)
- Linux kernel 2.6 or above (up to 3.19)
- glibc version 2.2 or 2.3
- POSIX Shared Memory (/dev/shm) support is required for 3D applications

Note: If a Linux 2.6.11 or newer kernel was built with CONFIG_AGP enabled, the kernel AGP front-end is required to load the fglrx kernel module. To identify whether your kernel is CONFIG_AGP enabled, look for CONFIG_AGP=y in the kernel config file, or whether the 'agpgart' module is loaded.

Here are some of the issues that have been resolved in the new release:

- Segmentation fault observed while launching some OpenGL games in RHEL7.1
 - Error message observed during installation through rpm package in RHEL 6.5, 7.0
 - System hangs while running Dying Light
 - clinfo could not recognise up to four GPU devices
- AMD Catalyst 15.7 can be useful for all those who have been facing issues with the earlier release.

Kali Linux 2.0 release scheduled

Kali Linux is one of the most popular Linux distributions for penetration testing and digital forensics, among other things. There was a silence after the release of version 1.1.0 in February 2015.

CORE EMBEDDED SOFTWARE DEVELOPMENT COURSES

School of Embedded Software
www.schoolofembedded.org

COURSES:

- Embedded System Programming on Arm Cortex-M platform
- Arm Cortex-M - Architecture, Internals and Programming
- Embedded OS - Architecture, Internals and Programming
- Real-Time OS - Architecture, Internals and Programming
- Embedded OS - Board Support and Drivers Development
- Linux Internals for Driver Development
- Embedded Linux/ Kernel Internals
- BeagleBone/Black hw platforms - upcoming
- Embedded Linux/ Device Drivers
- BeagleBone/Black hw platforms - upcoming
- Embedded Linux/Real-time
- BeagleBone/Black hw platforms - upcoming

VENUE:

School of Embedded Software Development
Kalyan Nagar, HRBR Layout, Bangalore - 560043

Faculty : **Babu Krishnamurthy**

Email : babu_krishnamurthy@schoolofembedded.org

Phone : +91-98453-65845/080-41207855

COURSE DETAILS:
