

Figure 4: Htop colour options

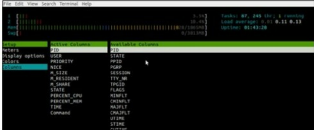

Figure 5: Htop Columns

columns are displayed under 'Active Columns'. All the available columns are displayed under 'Available Columns'. To add a column, click on the appropriate column name in 'Available Columns'. Then click **F5** -> **Add**. With this, the chosen column should show under 'Active Columns'. You can adjust its place in the Htop output by clicking on it in 'Active Columns' and moving it up or down with **F7** or **F8**, respectively. You can remove a column from 'Active Columns' with **F9**. With **F10**, you can save the settings and return to the Htop summary and process the list output.

In addition to all this, the **footer** displays some useful options like search, sort, kill and a few more that can really help you use Htop like a professional. Given below are some keys that will help you use Htop more effectively.

- I**: List open files used by a process
- F6**: Sort processes by any column
- M**: Sort processes by memory usage
- P**: Sort processes by processor usage
- F3** or **/**: Search processes
- F2**: Enter set up
- F9** or **k**: Kill a process

Command line options

Htop can also be executed with different options. Listed below are some of the command line options for Htop.

- d** Delay between output updates
- C** Run Htop with different colour modes
- p** Display output for specific PIDs
- s** Sort the output
- u** Display processes for the specific user
- v** Display Htop version

Htop is a useful utility. It's a simple and readable interface, has many configuration options and abilities to represent system data in different ways, and is a good choice for system monitoring. System monitoring is an essential part of any systems administrator's job, and utilities like Htop are always supportive. Apart from Htop, there are several other open source tools like *iostat*, *ps*, *vmstat*, *df* and *w*, which are worth considering for monitoring system resources. **END**
