

Table 1

Framework/Toolkit	Development and deployment platform
AltovaMobileTogether	Android, iOS, Windows and HTML5 browser based clients
Android	Android
Appception	Android and iOS
BlackBerry	BlackBerry
Codename One	Android, iPhone, BlackBerry, Windows Mobile and J2ME
ConvertigoMobilizer MEAP	Android, BlackBerry, iPhone and Windows Mobile
Corona SDK	iOS, Android and Nook Color
DragonRAD	Android, BlackBerry and Windows Mobile
GeneXus	Android, Apple iOS (iPhone, iPad), BlackBerry and HTML5
IBM MobileFirstStudio	iOS, BlackBerry, Android, Windows Phone, Adobe AIR, mobile Web apps and desktop browser Web pages
Intel XDK	Android, iOS, Windows, Amazon, Facebook, Chrome, Nook, Firefox Marketplace and Tizen
iOS SDK	iPhone, iPad and iPod Touch
Lazarus	Windows CE, Linux and SymbianOS based devices
LambdaNative	iOS, Android, BlackBerry, Windows, Mac OS X, Linux, OpenBSD and OpenWrt
M2Active by Service2Media	Android phones and tablets, iOS phones and tablets, BlackBerry, Windows Phone and J2ME
Meme IDE	Android and Windows Mobile
Mulberry	Android, iOS and mobile Web apps
NeoMAD	Android, iOS, Windows Phone, Windows Store Apps, Blackberry and J2ME
OpenPlug	Android, iOS (iPad, iPhone, iPod Touch), Symbian and Windows Mobile
OpenMEAP	iOS (iPhone, iPad, iPod Touch), Android and BlackBerry
OutSystems	Android, iOS devices and Windows Phone
PhoneGap & Apache Cordova	iPhone, Android, Tizen, Windows Phone, BlackBerry, Symbian, Palm and Bada
Rhomobile	iOS, Windows Mobile, BlackBerry, Symbian and Android
RubyMotion	iOS and Android
Sencha Touch	iOS, Android, Kindle, BlackBerry and Bada
Smartface	Android, iOS, Kindle, Gear and Google Glass
Stencyl	iOS
Unity	Android, Xbox 360, PS3, iOS, PC, Mac, Wii, BlackBerry Playbook, Roku 2 and Nokia Symbian

In short, Codename One is a cross-device platform that allows developers to create code in Java, which can work with any device including iPhone/iPad, Android, BlackBerry, Windows Phone 7 and J2ME devices.

Figure 1: Codename One

Components and modules in Codename One

Codename One is a framework or, simply, a suite of tools, which is specifically developed for mobile application development, mostly related to Java architecture. The key goal behind the project is to accept the multiple, complex as well as fragmented tasks of mobile phone programming, and then to integrate and process them under a set or cluster of tools, services and APIs. This is a powerful approach to mobile app development that does not compromise on control.
