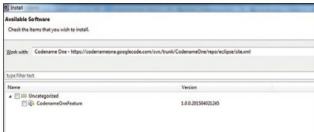

Figure 4: Codename One fetched by the server in Eclipse

Codename One has a strong association with a number of different modules and services to support the development of powerful mobile phone applications:

- APIs
- Plugins
  - IDE integration
  - Simulator
  - Designer
- Build servers
- Cloud servers

There are a number of advantages of using Codename One, some of which are listed below:

- Extremely fast and effective simulator with a good GUI designer
- Debugging as well as profiling tools available for standard Java application development
- Developer-friendly with drag-and-drop implementation for rapid application development
- The resources are scaled automatically as per different DPIs

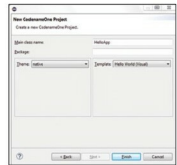

Figure 6: Selecting the theme and templates

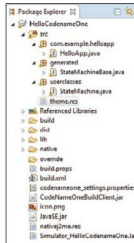

Figure 7: Project Explorer in Codename One

Figure 8: Codename One GUI designer

- There is no specific need for permissions, manifests and grants, as the software automatically detects and implements the required permissions and grants
- The resources can be dynamically downloaded
- The component hierarchy or 'views' is comparatively simple in Codename One

## Downloading, installing and integrating Codename One with the Eclipse IDE

Codename One can be installed on any Java based IDE including Eclipse, IntelliJ IDEA, NetBeans, etc.

The screenshots illustrate the installation of Codename One in Eclipse as a plugin (see Figures 2 to 9).

The URL to be specified in Eclipse is <https://codenameone.googlecode.com/svn/trunk/CodenameOne/https://eclipse/site.xml>
