

```
try {
ShellFactory.createConsoleShell("MyShellPrompt", "MyShell",
new MYCLIClass()).commandLoop();
} catch(IOException e) {
e.printStackTrace();
}
@Command(description="Fetch the version of blah-blah
installed on this machine")
public int getVersion(String args) {
return Integer.parseInt(MyAPI.getVersion());
}
```

- You can even add descriptions to your parameters as follows:

```
@Command(description="my command description")
public int someCommand(
@Param(name="param1", description="description of param1")
int param1,
@Param(name="param2", description="description of
param2")
int param2) {
.....
}
```

Basically, with just two steps (adding dependency/putting the JAR in your classpath) and by creating the shell and a function for your command, you're on your way!

Sample outputs

The green output below is all from the inbuilt features of the Cliche jar.

```
MyShell
MyShellPrompt> ?la
```

abbrev	name	params
!rs	!run-script	(filename)
!el	!enable-logging	(fileName)
!dl	!disable-logging	()
!gle	!get-last-exception	()
!sdt	!set-display-time	(do-display-time)
?la	?list-all	()
?l	?list	()
?ghh	?generate-HTML-help	(file-name, include-prefixed)
?l	?list	(startsWith)
?h	?help	()
?h	?help	(command-name)

```
h      hello      ()
hw     hello-world (p1)
```

```
MyShellPrompt> ?h hw
Command: hello-world
```

```
Abbrev: hw
Params: (p1)
Description: prints hello world and an integer ahead
Number of parameters: 1
p1 int prime number

MyShellPrompt> hw 13
Hello World: 13
MyShellPrompt>
```

Here is the sample code:

```
package cliché.trial;
import java.io.IOException;
import asg.cliche.Command;
import asg.cliche.Param;
import asg.cliche.Shell;
import asg.cliche.ShellFactory;

public class Trials {

@Command(description="prints hello.")
public int hello() {
System.out.println("Hello");
return 1;
}

@Command(description="prints hello world and an integer
ahead")
public void helloWorld(@Param(name="p1",
description="prime number") int p1) {
System.out.println("Hello World: " + p1);
}
public static void main(String[] args) throws
IOException
{
try {
Shell myShell = ShellFactory.createConsoleShell("M
yShellPrompt", "MyShell", new Trials());
myShell.commandLoop();
} catch (IOException e) {
throw e;
}
}
}
```
