

- HTML5 can access the hardware using 'C' system calls. This makes it easier for the GUI and application logic to be written in HTML5.
- It has built-in emulators to check the functionality of native applications in the respective platforms.
- It enables porting of existing applications to various mobile platforms.
- Wormhole JavaScript library provides access to device functionality like sensors, cameras, networking, file systems and so on.

Installing MoSync

MoSync is available for Windows and Mac OSX. It can be downloaded from <http://www.mosync.com/download>

The system requirements for Windows are:

- Windows XP, Windows Vista, 7 or higher
- 300MB free disk space
- Java SE Runtime Environment

And the requirements for Mac OS X are:

- Mac OS X Snow Leopard (10.6.6 or higher)
- 250MB free disk space
- Java SE Runtime Environment
- Xcode

Xcode can be installed from the Apple App Store. It is required to build device-ready application packages for iOS.

A comparison of MoSync Reload and the SDK

MoSync Reload is a tool to develop applications in HTML5 and JavaScript for Android, iOS and Windows Phone mobile platforms, and instantly see the results on any number of devices or emulators. It enables you to quickly edit HTML/JS/CSS code and run it—just like pressing the reload button in a Web browser. Native features such as sensors, cameras, etc, can be accessed and the user interface can be created using real native UI components. Available for Linux, apart from Windows and Mac OS, MoSync Reload can be downloaded from <http://www.mosync.com/download/reload>

Developing your first C/C++ application

All it takes to build your first application is a beginner's knowledge in C or C++. Let's go through a very simple

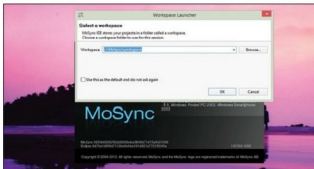

Figure 1: Select a workspace

A comparison of MoSync Reload and SDK

Features	MoSync SDK	MoSync Reload
Supported Operating Systems	Windows and Mac OS	Windows, Mac, Linux
C++ Development	Yes	No
HTML5 or JS Development	Yes	Yes
Eclipse based IDE	Yes	No
Building native application	Yes	No
JS Debugging	Full Debugger	Only Inspector
Interactive JS Workbench	No	Yes
Use External editor	Possible	Yes

C/C++ program, which will familiarise you with the fundamentals of the MoSync API and event handling.

Launching MoSync: Install MoSync and launch the application by right clicking the MoSync IDE icon.

Creating a new project: Next, follow the steps given below to create a new project:

- Select the default workspace folder.
- Create a new project by clicking the *File* tab and navigating to a new project.
