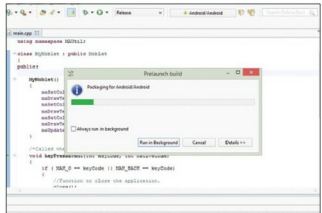

Figure 6: Building your application

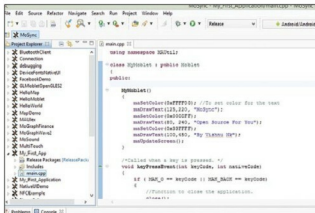

Figure 5: Coding

- Select **MoSync Project** from the C/C++ wizard.
 - Select the C++ **Moblet Project** template from the template section.
 - Conclude the creation of the new project by entering a name for the project and clicking on the **Finish** button.
- Coding:** Now, type the following commands:

```
#include <conprint.h>
```

```
/* Developing your first C/C++ Application.
```

```
 * Author: Vishnu NK
 * Open Source For You
 * */
```

```
using namespace MAUtil;
```

```
class MyMoblet : public Moblet
{
public:
```

```
    MyMoblet()
```

```
    {
        maSetColor(0xFF0000); //To set color for the text
        maDrawText(125,220, "MoSync");
        maSetColor(0x00CCFF);
```

```
        maDrawText(80, 240, "Open Source For You");
        maSetColor(0x33FFFF);
        maDrawText(100,450, "By Vishnu Nk");
        maUpdateScreen();
    }
```

```
/*Called when a key is pressed. */
```

```
void keyPressEvent(int keyCode, int nativeCode)
```

```
{
    if ( MAK_0 == keyCode || MAK_BACK == keyCode)
```

```
    {
        //Function to close the application.
        close();
    }
```

```
    //Displays the key pressed.
```

```
    printf("You typed: %c\n", keyCode);
```

```
}
```

```
/**
```

```
 * Called when a key is released.
```

```
 */
```

```
void keyReleaseEvent(int keyCode, int nativeCode)
```

```
{
```

```
}
```

```
};
```

```
/* The main function of a program. */
```

```
extern "C" int MAMain()
```

```
{
```

```
    MyMoblet myMoblet;
```

```
    Moblet::run(&myMoblet);
```

```
    return 0;
```

```
}
```

Running the application: After finishing with the coding section, it's time to build and run your application.

- Click on the project's name in the **Project Explorer** view
