

```

maartenbaert@maartenbaert:~$ sudo apt-get repository ssh-maartenbaert/ncm1
[info] password for pradeepkumar:
You are about to add the following PPA to your system:
simplescreenrecorder is a Fedora-RPM screen recorder that supports X11 and Op
nGLES. It has a Qt-based graphical user interface. It can record the entire scre
n or part of it, or record Xorg, application directly. The recording can be pa
used and resumed at any time. Many different file formats and codecs are support
ed.
More information can be found here:
http://www.maartenbaert.be/simplescreenrecorder/

Figure 2: Installing Simple Screen Recorder (SSR)

Figure 3: Front screen of SSR

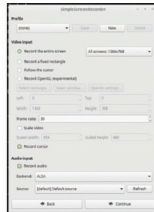

Figure 4: Screen and audio selection

the following is to install the 32bit version on a 64 bit OS. This will be helpful to record the 32bit OpenGL application

```
sudo apt-get install simplescreenrecorder-lib:i386
```

Fedora (all versions)

SSR is supported and developed by <https://copr.fedoraproject.org/copr/nickth/ssr/> for Fedora Linux.

Follow the steps given below to install it on various versions of Fedora:

- Enable RPM Fusion to install this package (separate versions are available for Fedora 20, 21, 22 and older versions).

```
$) su -c 'yum install --nogpgcheck http://download1.rpmfusion.org/free/fedora/rpmfusion-free-release-$(rpm -E %fedora).noarch.rpm'
```

Figure 5: Destination folder and video codec selection

Figure 6: Control the recording window

```
%fedora).noarch.rpm http://download1.rpmfusion.org/nonfree/fedora/rpmfusion-nonfree-release-$(rpm -E %fedora).noarch.rpm'
```

- Download the software from http://download1.rpmfusion.org/free/fedora/development/22/x86_64/os/ and install it using

```
rpm -ivh package_name.rpm
```

Usage of Simple Screen Recorder

SSR can be used to record:

- The full screen
 - A fixed rectangle
 - OpenGL applications with a specific x and y axis
- It can also record by following the cursor (refer to Figure 4).

You must select the audio, video codecs as per the PC's configuration. SSR supports non-supported devices as 'Not supported by the container', in which case, do not select that option. Google suggests WebM (Web movie format) which can be handled very easily opened using a web browser. So WebM format is recommended for video sharing sites. Refer to Figure 5 for the default options.

There is a customisable shortcut key available to record and pause the screen recording. You can watch a video that has been recorded using SSR at <https://www.youtube.com/watch?v=ZTVIBuc9MTo>
