

DVD OF THE MONTH

This month we have something for every open source fan—from the newbie to the developer.

Linux Mint 17.1 KDE: This is a long-term support release with KDE 4.14 as the desktop environment. It comes with updated software, many refinements and new features to make your desktop even more comfortable to use. You can find the ISO image of the live version on the DVD in the *other_isos* folder.

PCLinuxOS MATE Desktop (2014.12): This is a free, easy-to-use Linux-based OS that comes with a popular, multi-platform desktop environment for your computer. The bootable live DVD provides an easy-to-use graphical installer and the operating system supports a wide range of popular applications for the typical desktop user, including browser plug-ins and full multimedia playback.

Fedora Security Lab 21: Security Lab is a Fedora spin-off—an alternative version of Fedora, tailored for a particular type of user with hand-picked application sets and customisations. This alternative version of Fedora provides a safe test environment to work on security auditing, forensics, system rescue and aids in teaching security testing methodologies. You can use the ISO image provided in this month's DVD to burn on a disk or you can even use it in a virtual environment.

Puredyne 9.11: This is a Linux-based operating system that is aimed at creative people looking for tools other than what are standard. The OS is optimised for use in real-time audio and video processing, is built upon a low latency kernel and offers high responsiveness, something that artists working in this field need. It bundles top-end experimental creative applications alongside a solid set of graphics, audio and video tools in a fast, minimal package.
