As a new generation framework, it comes with decoupled libraries and standards-compliant library packages, which can be rapidly integrated to applications.

The performance benchmark of PHP frameworks

Phalcon is lightning fast as it inherits the power of C (Figure 3). It sets a higher benchmark for getting the data than for storing it. The Zend 1 framework is twice as fast as Symfony. Frameworks should first speed up development, and performance comes next. There are ways to improve the numbers on production servers. So don't reinvent the wheel—learn and use frameworks. There are various options that strike a balance between speed and performance.

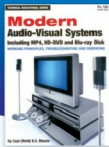

A recent study by the Melbourne-based website, SitePoint, showed that Laravel has over 25 per cent of the popular vote from developers, Phalcon has almost 17 per cent, Symfony2 over 10 per cent, while CodeIgniter and Yii have a 7.62 per cent share in the developer popular vote for PHP frameworks. **END**
