New SanDisk Ultra Fit USB 3.0 Flash drive arrives with 'low-profile design'

SanDisk Corporation has launched its high-speed SanDisk Ultra Fit USB 3.0 Flash drive in a tiny form factor. This is to provide expanded storage for PCs and other devices. It allows the transfer of a full-length movie in 40 seconds, with a transfer speed that is up to 10 times faster than a standard USB 2.0 drive.

The SanDisk Ultra Fit USB 3.0 can serve as an important accessory for notebooks, tablets, TVs, gaming consoles, car audio systems and more. The 64GB and 32GB versions offer write speeds that are up to 10 times faster than standard USB 2.0 drives, while the 16GB version offers a write speed that is up to five times faster than standard USB 2.0 drives. All capacities provide up to 130 MBps read speeds, feature SanDisk SecureAccess software to keep private files safe with password protection and 128-bit encryption, and include a year's subscription to RescuePRO software to recover lost or corrupted files.

Price: 16GB: ₹ 799
32GB: ₹ 1,649
64GB: ₹ 3,099

Here's a Junos-powered Open Compute Project switch

Juniper Networks has introduced Juniper Networks OXC1100, the first switch to combine Open Compute Project (OCP) hardware design with a carrier-class network operating system—the Junos OS. The new switch, which will be available the first quarter of 2015, provides customers who build large and massive data centres with an open, cost-effective, disaggregated switching platform.

Large cloud builders, who use Web 2.0 technologies, and Web-hosting companies are seeking ways to efficiently build data centre networks at scale to support tens, hundreds or thousands of servers. Combining Junos OS with OCP submitted hardware delivers a solution that removes the burden of support, installation and maintenance from cloud providers while offering an open source hardware design. Juniper Networks OXC1100 promises to provide large cloud providers with proven software and open source network hardware that is easy to deploy, integrate and support. It runs an optimised version of Junos, based on Linux, which delivers the features required for deployment in L3 networks. Additionally, the OXC1100 has a range of open software interfaces and automation capabilities including open, standards-based programmatic interfaces. It also has Python, which allows custom scripts and applications to interact with Junos.

Google launches Chromecast on Snapdeal

About a year-and-a-half after its global launch, Google has finally launched Chromecast officially in India, exclusively on Snapdeal.com. Chromecast is a thumb-sized device that can be connected to the TV using a port. It allows users to stream videos and images smartphones or laptops to the TV. Users can also use services like Hulu, Netflix or YouTube on a TV using Chromecast. However, Netflix and Hulu are not available in India. They can also access Android apps by pairing an Android smartphone with Chromecast. The Indian version of Chromecast supports Google Play Movies, YouTube and a few Play store apps like Eros Now, Spuul and YuppTV.

Airtel and Eros have special subscription offers for new users; the latter will be offering free access to its full catalogue for two months. Early Chromecast buyers will get to enjoy popular Bollywood and regional movies, music and TV shows for two months. Airtel will offer free data usage of 20GB for three months to existing customers while new users will get the free activation.

Since Chromecast can be paired with Android smartphones and tablets as well as with PCs to stream content to TVs, Google has had to consider copyright infringement issues and hence, users cannot stream local content to TV. Users can cast the Chrome browser tabs directly on the TV using Chromecast.
