

Installing new software

To install new software, go to *Help* → *Install new software*. Select available sites from *Work with combo box*.

In our case, let's select Luna - <http://download.eclipse.org/releases/luna>.

Select *Collaboration* from the available packages. Click on *Next* → *Review 'Install Details'*. Then go to *Next* → *Review licenses* → *I accept the terms of license agreements* → *Finish*.

It will start downloading the required packages and installing them.

Eclipse and SVN integration

We have already installed the collaboration toolkit in the above section.

New repository in Eclipse

Go to *File* → *New* → *Other* → *Select SVN from the Wizard* → *Select the repository location*; provide SVN URL and credentials.

IDE with cloud deployment

Cloud providers provide plugins to integrate within Eclipse so that programmers can use an IDE to deploy applications in the cloud environment. CloudBees is one such platform-as-a-

service provider which supports Eclipse; at least, it did when we last explored it.

PaaS perspective in Eclipse

You can run an application in the local as well as in the cloud environment from the Eclipse IDE itself.
