

Darktable 1.6.6 RAW image editor available for download

The Darktable development team has announced that its open source RAW image editor for GNU/Linux and OS X operating systems, known as Darktable 1.6.6, is available for download from the project's website.

The users of Darktable 1.6.4 are urged to update directly to the latest version of 1.6.6, skipping 1.6.5, as the latter contained some nasty bugs that have been fixed in this updated version.

Darktable 1.6.6 has also fixed an issue related with the Olympus E330 digital camera in version 1.6.4. Additionally, Darktable 1.6.6 includes miscellaneous bug fixes for lens correction, masks, profiled denoise, and other core functionalities of the application. The software is also compatible with FreeBSD and Solaris.

Android 5.1.1 Lollipop update now available for Nexus 10 and Nexus 7

While firms are still sending the Android 5.0 Lollipop update out to Android smartphones, tech buffs have already turned to Android 5.1.1. Nexus users have been recently receiving their Android 5.1.1 Lollipop update with improved security as well as new features. Google had announced the 5.1 Lollipop update in March, when it was available only to Nexus 5 users. But now, the Android 5.1.1 Lollipop update is available for Google Nexus 10 and Nexus 7 users as well. An updated Android 5.1.1 OTA update is available for Nexus 7 Wi-Fi 2012, 2013, Nexus Player and Nexus devices. With bug fixes and device protection features, the update boasts better performance.

Nexus 10 users have started receiving the updated Android 5.1.1 OTA with a downloading requirement of only 13.9MB and LMY47V as the build number. In fact, Nexus 10 happens to be the first Nexus device to get an Android 5.1.1 Lollipop OTA update, whereas, Nexus 9 users are still waiting for it.

Device protection is one of the most important features of the 5.1 Lollipop update. Now, a stolen device is expected to remain locked until the user signs in with his or her Google account, even after a 'factory reset' is done. Devices will also be able to connect to Wi-Fi networks with limited Internet access. Other features include high definition voice calls and enhanced battery life for devices running on the latest OS.

Indicator SysMonitor now available for Ubuntu 15.04

A new version of the handy system resource monitor 'Indicator SysMonitor' has been released. This utility makes keeping an eye on CPU load, RAM usage and battery capacity much simpler.

Although similar to Indicator MultiLoad, rather than fancier graphical touches like usage graphs and theming options, this app offers a more extensible approach by letting users add and display custom sensor commands. The underlying plumbing of the sysmonitor has been completely restructured as the changes should make maintaining and developing the project much easier.

Developers can now add more sensor functionality without having to worry about breaking the rest of the app as code for the various sensors is now kept in one place. Indicator SysMonitor is available for installation on Ubuntu 14.04 LTS, 14.10 and, for the first time, on 15.04.

KDE Plasma 5.3 released

KDE, the free and open source software for desktop and portable computing, had an impressive beta release in April. Now, KDE has introduced its latest update to the new Plasma 5 desktop environments, which is considered stable and ready for download. Plenty of new features have been added for Plasma 5 desktop users,

including improvement in the performance and stability, along with almost 400 bug fixes packed in.

The new and exciting features include enhanced power management features, configuration options including a new battery applet, an energy usage monitor and animated changes in screen brightness, all of which will help KDE last longer on portable devices. The update also features improved Bluetooth functionality with new panel applets making it easier to configure and connect with Bluetooth devices like smartphones, speakers, keyboards, etc.

To install Plasma 5.3 in Kubuntu 15.04, you need to add the KDE Backports PPA, run the Software Updater tool and install any available updates.
