

Mozilla Thunderbird 38.0 now has support for Yahoo! Messenger

Mozilla had concentrated its efforts on Mozilla Firefox, which has continuously received new features, while there'd been no plans to upgrade Mozilla Thunderbird. Now, the time has come for Thunderbird to rise again, as its version number will be finally synchronised with Firefox's.

Thunderbird

The good news is that Mozilla Thunderbird 38.0 is not only a version number upgrade but it's a feature release that brings some interesting new functionality to the application.

The new update supports the Yahoo! Messenger chat protocol, has the ability to filter emails when archived (filtering sent emails), and can search multiple or all address books. It will also support internationalised domain name URLs in the RSS component, the display expanded columns in the folder pane, OAuth2 support for gmail accounts, as well as the ability to add a reading position marker line to email conversations.

Another awesome feature is the integration of the popular Lightning extension, which will offer out-of-the-box calendaring functionality. However, users will be able to choose if they want to keep or disable Lightning.

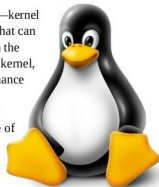

In addition to the new features mentioned above, there will be lots of bug fixes for some of the most annoying issues reported by users since the previous stable release, and various other under-the-hood improvements—a notable one being that it will no longer use SHA-1 to sign messages.

Latest Linux kernel 4.0.1 released

Linus Torvalds released the latest branch of Linux—kernel 4.x, and it's the most advanced and stable version that can be downloaded right now. Torvalds only deals with the development versions and the major aspects of the kernel, while Greg Kroah-Hartman looks after the maintenance for the stable iteration once it becomes available.

Greg Kroah-Hartman recently made an official announcement saying, "I'm announcing the release of the 4.0.1 kernel. All users of the 4.0 kernel series must upgrade."

Linux kernel 4.0.1 has been released with a small upgrade, with a few drivers and small fixes, but one could consider updating to the latest version. You can download Linux kernel 4.0.1 from Softpedia.

Users to upgrade to Xubuntu 14.0 as version 12.04 LTS reaches its end of life

With the stable version of Xubuntu 15.04 (Vivid Vervet) released for download, developers have instructed Xubuntu 12.04 (Precise Pangolin) LTS users to upgrade to Xubuntu 14.04 (Trusty Tahr) as soon as possible. Of course, nothing stops one from

upgrading to Vivid Vervet directly, but LTS releases are supported with security patches and software updates for three years, which means that Trusty Tahr will continue to receive support until April 2017.

An announcement by Xubuntu developers stated that, "While it will continue to receive updates from the repository, we will no longer be providing any Xubuntu support for packages. Packages provided via Xubuntu-owned PPAs will also be discontinued."

Other Ubuntu 12.04 LTS (Precise Pangolin) flavours will continue to receive updates for two more years, until April 2017. Xubuntu 12.04 only had a three-year support cycle that ended on April 26, 2015. You can download Xubuntu 15.04 via Softpedia.

Synfig Studio 1.0—open source animation gets serious

Synfig Studio 1.0 released its cross-platform software over a year ago, with claims of offering "industrial-strength solutions for creating film-quality animation" with new and improved features.

The new features include an improved user interface that is easier and more intuitive according to project developers. A new single window has been added by the client for tidy working and has been reworked to use the latest GTK3 libraries. Other notable changes include the addition of a fully-featured bone system.

The joint and pivot 'skeleton' framework is suited to 2D cut-out animation, and appears to be super efficient when coupled with the complex deformation that's new to this release. The new non-destructive cut-out tools, friction effects and initial support for full frame-by-frame bitmap animation can help unlock the
