

- Does the PaaS provider offer a hybrid cloud model?
- What are the features to ensure data security and flexibility?
- Do the technologies supported by the PaaS provider cover the organisation's existing set of applications?
- What levels of support does the PaaS provider offer for continuous integration, continuous testing, innovation and customisation?
- What are the features for high availability?
- What are the maintenance best practices followed by the PaaS provider?
- What are the vendor-specific technical services used in the PaaS solution? Are these based on any industry standards? Are there any suitable alternatives in other

- PaaS solutions? How easily can you migrate to other PaaS platforms from the one you have selected?
- Is the PaaS platform well integrated with popular public cloud service providers?
 - Does the service provider support horizontal, vertical or auto scaling?
 - Which are the IDEs supported?
 - Which are the supported source code repositories?
 - How many DevOps practices are supported?
 - Does the PaaS platform support configuration management tools like Chef or Puppet?
 - How are the SLAs managed?

Try getting an answer to as many of these questions as possible before finalising the PaaS provider. 

SOME OF THE TOP PAAS PLATFORM VENDORS

Oracle Cloud Platform

Oracle Cloud platform provides agility through faster application development by leveraging standards-based shared services. It also includes middleware technology based on Oracle Fusion Middleware and Oracle Exalogic Elastic Cloud, as well as database functionality based on Oracle Database and Oracle Exadata Database Machine.

Developer(s): Oracle

Licence: Proprietary

Website: <https://cloud.oracle.com/paas>

Supported technologies: Big Data Discovery, Java Standard Edition, Node.js, Java, JavaScript, other Java-based scripting languages (JRuby, Scala, etc), SQL and PL/SQL, Generic Java SE support.

Features:

- Oracle Fusion Middleware and Oracle Database technologies
- Elastic Scaling
- Oracle Mobile Application Framework provides cross-platform mobile app development for iOS and Android
- Key Vault key management service provides security across middleware, databases, and servers

Offerings: Database, Java, Messaging, Database backup, Documents, Business Intelligence, NoSQL DB, IoT Integration, etc.

Free trial: Available

HP Helion Development Platform

HP Helion Development Platform is a PaaS offering that enables developers to rapidly develop, deploy, manage and scale cloud applications across multiple clouds. It supports various programming languages and technologies.

Developer(s): HP

Licence: Proprietary

Website: <http://www8.hp.com/us/en/cloud/helion-devplatform-overview.html>

Supported technologies: Python, Ruby, Scala, Clojure, Go, Java, Node.js, Perl, MySQL, PostgreSQL, Redis, Memcached and RabbitMQ

Features:

- Cloud Foundry based and fully integrated with HP Helion OpenStack
- Open and interoperable platform
- Disk, memory and placement zone constraints on settings per application
- Auto-scaling and application log drains

Offerings: Application Lifecycle Service (ALS), Database as a Service, Messaging Service

Free trial: Available
