

Linking clay-simple ...

You can then execute *clay-simple* to generate the required CSS output as shown below:

```
$ ./clay-simple

body
{
  font-family : "Baskerville","Georgia","Garamond","Times",
  serif;
}

/* Generated with Clay, http://fvisser.nl/clay */
```

A more comprehensive example is shown below for the HTML pre-tag:

```
-- clay-pre.hs

{-# LANGUAGE OverloadedStrings #-}

import Clay

main :: IO ()
main = putCss $
  pre ?
    do border dotted (pt 1) black
       whitespace (other "pre")
       fontSize (other "8pt")
       overflow (other "auto")
       padding (em 20) (em 0) (em 20) (em 0)
```

You can compile the above *clay-pre.hs* file as shown below:

```
$ ghc --make clay-pre.hs
```

Executing the above compiled *clay-pre* binary produces the following output:

```
$ ./clay-pre

pre
{
  border      : dotted 1pt rgb(0,0,0);
  white-space : pre;
  font-size   : 8pt;
  overflow    : auto;
  padding     : 20em 0em 20em 0em;
}

/* Generated with Clay, http://fvisser.nl/clay */
```

You can also add custom values using the *Other* type class or the

fallback operator `'-'` to explicitly specify values. For example:

```
-- clay-custom.hs

{-# LANGUAGE OverloadedStrings #-}

import Clay

main :: IO ()
main = putCss $
  body ?
    do fontSize (other "11pt !important")
       "border" - : "0"
```

Compiling and executing the above code produces the following output:

```
$ ghc --make clay-custom.hs
[1 of 1] Compiling Main             ( clay-custom.hs, clay-
custom.o )
Linking clay-custom ...

$ ./clay-custom

body
{
  font-size : 11pt !important;
  border    : 0;
}

/* Generated with Clay, http://fvisser.nl/clay */
```

You can explore more of Clay from the official project home page <http://fvisser.nl/clay/>.

A number of good books are available for further learning. Two books that I recommend, which are available online and in print, are listed at the end of the article.

The <https://www.haskell.org> website has plenty of useful resources. You can also join the haskell-cafe@haskell.org and beginners@haskell.org mailing lists (https://wiki.haskell.org/Mailing_lists) for discussions. The folks in the #haskell channel on [irc.freenode.net](https://www.freenode.net) are also very helpful.

Recommended books on Haskell

1. Bryan O'Sullivan, Don Stewart, and John Goerzen (December 1, 2008): 'Real World Haskell' (<http://book.realworldhaskell.org/>). O'Reilly.
2. Miran Lipovaca (April 21, 2011): 'Learn You a Haskell for Great Good! A Beginner's Guide' (<http://learnyouahaskell.com/>). No Starch Press.
