

The following 3 packages are going to change vendor:

```
kernel-docs    opensUSE -> obs://build.opensuse.org/Kernel
kernel-firmware opensUSE -> obs://build.opensuse.org/Kernel
ucode-amd      opensUSE -> obs://build.opensuse.org/Kernel
```

3 packages to upgrade, 1 new, 3 to change vendor.

Overall download size: 75.9 MiB. Already cached: 0 B After the operation, additional 231.2 MiB will be used.

Update bootloader...
```

The 'update bootloader' takes some time, so please wait for a couple of minutes and you'll see the shell prompt.

Finally, a reboot is required and you'll be booted up in the latest Linux kernel 4.x. Happy hacking!
