

Figure 4: Moodle integration

```
$ sudo bbb-conf --secret
URL: http://172.16.50.247/bigbluebutton/
Secret: 1c5d8b004826c6edcbe19fxxxxxxxxxx
```

Both the above parameters have to be set as shown in Figure 4.

Figure 5 is a demonstration of a lecture on a whiteboard, wherein a teacher is typing some information and there are two other users in the session, listening in. The users are viewing the video of the teacher, to whom they can send messages through the window provided in the right hand column.

Using the open source tools Moodle and BigBlueButton, a huge amount of money can be saved by colleges and universities across the country. These institutions need to step

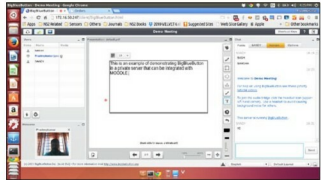

Figure 5: A complete demonstration of BigBlueButton

forward and motivate students and faculty members to learn and use open source tools for their education.

Figure 1: Sugar IDE

Why Sugar is interesting

Sugar supports sharing and collaboration among users. It does not contain applications like other desktop environments. Learner applications in Sugar are called 'Activities'. They include activities like Pippy (an introductory environment to learn Python), Journals (object and activity browsing), Distance (to measure the distance between two laptops, for instance), etc., which are exclusively designed to be easy-to-use for kids. In the Sugar Neighbourhood view, children see their connected friends and they can join each other's activities.

Sugar teaches through three experiences:

Sharing: This shows the presence of others involved in the activity by sharing ideas.

Reflecting: With this, Sugar uses journals to record each activity of the user. This helps in assessing progress.

Discovering: Here, users with different skill levels get together on a single platform and go deeper and deeper into exploring a topic, with no restrictions.

Sugar provides children with the opportunity to explore, express and experiment on their own.
