

the FSF for not conforming to the free standards expected of such a licence. It was, however, approved by the OSI. Subsequently, Artistic License version 2 made some changes to its original draft and now enjoys the approval of the FSF too. Artistic License version 2 is GPL-compatible.

Mozilla Public License (MPL)

The MPL is a detailed licence developed by the Mozilla Foundation. It is approved by both the FSF and the OSI. But MPL version 1.1 is not compatible with GPL. MPL version 2 is also not compatible with GPL under certain circumstances. Thus, developing a project involving both GPL licensed components and MPL licensed components is a difficult task. MPL is somewhat relaxed when compared with many other copyleft and permissive licences. Thus, software licensed under MPL can be widely used by proprietary developers. Examples of projects using MPL include Mozilla Firefox and Mozilla Thunderbird.

Common Public License

The Common Public License (CPL) has been proposed by IBM. Both FSF and OSI have approved it, making it a free and open source licence. The Korn shell was originally released under CPL. The CPL is not compatible with GPL. To reduce the number of free/open source licences, IBM agreed to collaborate with the Eclipse Foundation. Now, both IBM

and the Eclipse Foundation are using a licence called the Eclipse Public License (EPL), which is based on CPL.

Microsoft Public License

It might be shocking to read about a free and open source licence supported by none other than Microsoft. In fact, Microsoft has two open source licences -- Microsoft Public License (Ms-PL) and Microsoft Restrictive License (Ms-RL). The former is the least restrictive licence proposed by Microsoft. It is approved by both the FSF and OSI, thus making Ms-PL a free and open source software licence. But Ms-PL is not GPL compatible, according to FSF.

There are literally hundreds of free/open source licences for developers to choose from and I have just covered the tip of the iceberg. But interested readers can find the full texts of each and every licence on the Web. Devour them carefully and, who knows, you might even uncover a hitherto unknown loophole in one of the licences. This has happened in the past, leading to revisions in the texts of many licences. **END**
