

group member of the Linaro Enterprise Group (LEG). Alibaba will collaborate with a range of companies within LEG to optimise the ARMv8-A software platforms and maximise potential savings in a range of real deployment use cases. These platforms aim to bring the energy-efficient processing of ARM-based processors, coupled with a variety of workload optimised technologies that will help data centres reduce their total cost of ownership (TCO).

The availability of a number of ARMv8-A 64-bit silicon solutions and software platforms creates additional choice and avenues of innovation for data centres.

The ARM ecosystem enables partners to innovate and develop workload optimised solutions, while safeguarding

existing investments by leveraging a common instruction set architecture. Next-generation ARM-based cloud infrastructure will help businesses scale predictably, enabling access to important services whenever and wherever needed.

Robert Booth, COO, Linaro, stated in the official release, "Since its start in November 2012, the Linaro Enterprise Group and its members have been developing an open source software platform in preparation for the release of multiple ARMv8-A 64-bit silicon solutions. Now is the right time for data centre hosts and others to accelerate the launch of industry-leading solutions by helping define actual workloads and by working with Linaro's engineering organisation to develop and optimise the software. We are excited to welcome Alibaba as a Linaro member, and look forward to working with them and benefiting from their breadth of sector experience to help fully realise the advantages of the ARM architecture in this market place."

Samsung Galaxy S5 receiving Android Lollipop update in India!

Samsung India has reportedly started rolling out the Android 5.0 Lollipop update for Galaxy S5. It's an over-the-air (OTA) update, and a notification pops up whenever the update becomes available. Users can also manually check for it by going to *Settings > About Phone > Software update* on the Galaxy S5. The update is about 875MB in size.

The Galaxy S5 has been the subject of much speculation as video previews on the Internet show the phone receiving better touch response after running the new upgraded OS. A recent report suggested that Galaxy S5 Mini will also receive the update in the second quarter of 2015.

FossWorkshop Delivering OPEN SOURCE Based training

Through Professional Workshop to People and Organizations Worldwide.

Batches Starting From August 2015.

Seats are limited
Registration Open
From 10th May 2015

Fossworkshop Feature Courses

(100% Job with Bank Guarantee)

Short Term Courses

Foundation Courses

- Android
- Big Data & Hadoop
- C++
- HTML, CSS and JQuery
- Java
- Linux Administrator
- Openstack
- PHP & MySQL
- Python
- Ruby on Rails

Advanced Courses

- Android
- Drupal
- Python
- Ruby on Rails

Embedded Courses

- Embedded Systems
- VLSI

Long Term Courses

Fossworkshop Edge

- Linux Expert
- Openstack Expert
- Drupal Expert
- Java Expert

Salient Features:

Only for Fossworkshop Feature Course

- Only Fresher (BE, BTech, MCA & Msc) can Apply
- Get your first jobs within 30 weeks
- Mentor & Trainer from Best in IT Industry (Exps +10years)
- Assistant for education Loan
- Selection Based on Test Score
