

sees the opportunities Linux training and certification present but has not been able to pursue these programmes due to cost barriers. In recent years, India has ranked amongst some of the lowest in terms of median annual income (in 2013, it ranked at the 99th position among 131 countries). This is why it was chosen as the first location for region-specific pricing. In the coming months, additional regions will be considered for a similar program to help increase access to Linux learning materials.

"Linux and open source software are built on the philosophy of contribution and participation that is based on skills and desire, not whether or not you can afford to participate," said Linux Foundation executive director, Jim Zemlin. "Our role is to expand access, so as many individuals as possible can join the Linux community. This offering will serve as an entry point to a lucrative IT career with Linux, to countless new professionals."

'Essentials of Systems Administration' was chosen as the first course to receive subsidised pricing as it is foundational within the industry—after completing this course and passing the certification exam, individuals will be qualified for an entry-level job as a Linux sysadmin. Those who do not have any experience with Linux can begin with the free 'Intro to Linux' course offered by The Linux Foundation and edX, before taking up this offering.

Developers announce a new stable version of Linux Mint 17.2 'Rafaela' Xfce

Linux Mint has now released a stable version of Linux Mint 17.2 'Rafaela' Xfce. According to reports, the recently released distro comes with the latest Xfce 4.12 desktop environment, among other features and fixes. While

the changes might not seem very exciting, they promise to be more efficient, with innumerable smaller improvements. "Linux Mint 17.2 is a long term support (LTS) release that will be supported until 2019. It comes with updated software and brings refinements and many new

features to make your desktop experience more comfortable. Linux Mint 17.2 features the latest Xfce 4.12 desktop environment. Linux Mint 17.2 features Xfce 4.12, MDM 2.0, the Linux kernel 3.16 and an Ubuntu 14.04 package base," reads the official announcement.

Introducing Bodhi Linux 3.1.0, the first OS with Moksha

Bodhi Linux 3.1.0 is now available for download. On the Linux based operating system Bodhi, the new desktop environment is Moksha, which happens to be the first stable version in the series. Prior to Moksha, Bodhi deployed Enlightenment. However, the Enlightenment E17 project is no longer in use.

The Bodhi project was awaiting a resolution after its developer quit working on it. While users felt that the distro was defunct, the developer was able to bring back the desktop environment with a completely new name and appearance. Now, it seems that the project is back on track with a stable release, new desktop and a lot more potential.

Meanwhile, a preview version of it was launched recently and users are now free to report to the developers if they face some issues with it.

"This release is a bigger deal for the Bodhi team than our previous update releases have been in the past. The reason for this is because this release is the first

Red Hat Enterprise Linux OpenStack Platform 7 now available

Red Hat Inc. recently announced the public availability of Red Hat Enterprise Linux (RHEL).

OpenStack Platform 7 with more features and fixes. Based on the OpenStack Kilo, RHEL OpenStack Platform 7 comes with a new

management tool that makes the installation of the OpenStack platform on top of the RHEL 7 operating system easier. Apart from organising your day-to-day work, the new deployment tool also establishes the foundations for the upgrade of subsequent launches of the OpenStack platform and orchestrated live system updates.

The new tool also promises easy migration of business-critical applications, greater security control, traditional apps, incremental backup support and network flexibility. It supports NetApp Data ONTAP, E-Series and 7-mode along with the integrated configuration of Red Hat Ceph Storage 1.3 clients and servers.

"We have raised the standard for production-ready OpenStack with RHEL OpenStack Platform 7. With an increased adoption of OpenStack, we are excited about addressing the need for reduced time to solution with a truly open approach that enables automated deployment and lifecycle management of the infrastructure," says Radhesh Balakrishnan, general manager, OpenStack, Red Hat.
