

"This release of Plasma brings many nice touches for our users such as much-improved high DPI support, KRrunner auto-completion and many new beautiful Breeze icons. It also lays the ground for the future with a tech preview of Wayland session available. We're shipping a few new components such as an audio volume Plasma widget, a monitor calibration tool and the user manager tool comes out beta," reads the official announcement.

Ubuntu Touch drops Calendar and the Dekko email client in its next update

According to the latest reports, developers are all set for a major overhaul in the next OTA update for Ubuntu Touch. While users would be able to see a lot of improvements along with new features and fixes, Calendar and the Dekko email client won't be part of the update. If sources are to be believed, this cycle has been very easy due to a switch to GCC 5.

Developers already need to deal with a lot of issues and the adoption of new apps for the default installation has added to the work. While, they still have a few weeks for the launch of new updates, Ubuntu lovers are waiting desperately for the big release.

"... we will also prioritise all work related to getting emulator images building again and actually 'working', as this is a blocker for OTA-6. We also wanted to include Calendar and Dekko, by default, in OTA-6, but it seems both aren't quite ready for that yet. Will probably have to be postponed once again. For now, users will have to get those from the store," Łukasz 'sil2100' Zemczak posted.

Oracle Linux 6.7 comes with Unbreakable Enterprise 3.18.13 kernel

Oracle announced the general availability of Oracle Linux 6 Update 7, which comes with the following kernel packages:

- Unbreakable Enterprise Kernel (UEK) release 3 (kernel-uek-3.8.13-68.3.4.el6uek) for x86-64
- Unbreakable Enterprise Kernel (UEK) release 2 (kernel-uek-2.6.39-400.250.7.el6uek) for i386
- Red Hat compatible kernel (kernel-2.6.32-573.el6) for i386 and x86-64

By default, both the Unbreakable Enterprise Kernel and the Red Hat compatible kernel for the specific architectures (i386 or x86-64) are installed and the system boots the Unbreakable Enterprise Kernel.

Prominent features of Oracle Linux 6.7 include OpenSCAP (Open Security Content Automation Protocol), which was built with the oscap utility for enhanced security compliance and auditing, as well as high

availability and load balancing functionality with HAProxy and Keepalived, which are supported under Oracle Linux Premier Support subscriptions.

Oracle Linux can be downloaded, used and distributed free of charge and all updates and errata are freely available. For support, you get to decide which of your systems require a support subscription. This makes Oracle Linux an ideal choice for your

CORE EMBEDDED SOFTWARE DEVELOPMENT COURSES

School of Embedded Software
www.schoolofembedded.org

COURSES:

- Embedded System Programming on Arm Cortex-M platform
- Arm Cortex-M - Architecture, Internals and Programming
- Embedded OS - Architecture, Internals and Programming
- Real-Time OS - Architecture, Internals and Programming
- Embedded OS - Board Support and Drivers Development
- Linux Internals for Driver Development
- Embedded Linux/ Kernel Internals
- BeagleBone/Black hw platforms - New Release
- Embedded Linux/ Device Drivers
- BeagleBone/Black hw platforms - New Release
- Embedded Linux/ Real-time
- BeagleBone/Black hw platforms - New Release

VENUE:

School of Embedded Software Development
Kalyan Nagar, HRBR Layout, Bangalore - 560043
