

Figure 4: Screenshot of Pescanner - address with MD5 Hash

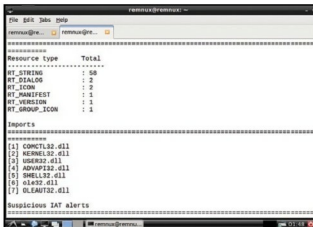

Figure 5: Screenshot of Pescanner - DLL imports

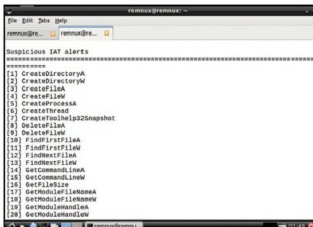

Figure 6: Screenshot of Pescanner - entry point information

The usage is:

```
pescanner osfy.exe
```

Pestr: To inspect for encrypted strings in PE files, use the following command:

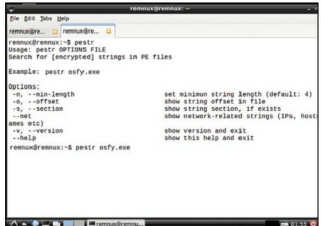

Figure 7: Screenshot of Pestr

```
pestr <filename>
```

The usage is:

```
pestr osfy.exe
```

Pyew: This is widely used for code analysis, for which you need to issue the following command:

```
pyew <filename>
```

The usage is:

```
pyew osfy.exe
```

Readpe: This is used to extract file header information from portable executables, for which the command is as follows:

```
readpe <filename>
```

The usage is:

```
readpe osfy.exe
```

Signsrch: This is used to search for various signatures with specific options. For example, if my requirement is to extract an RVA (relative virtual address) from PE files instead of the offset address, I would use the following command:

```
signsrch <option> <file1>.....<file n>
```

The usage is:

```
signsrch -e osfy.exe
```

Peframe: This is used to extract file information, the packer method, digital signatures, suspicious API, metadata
