

YOU SAID IT

is not selling well. Nokia might also discontinue its production.

We have taken note of your content-related suggestions listed in Points 2 and 3, respectively. We will pass these on to our team of authors to take up for inclusion in future editions of LFY. Please do keep reading!

As regards the low-cost eZine version of the magazine, we are already evaluating this option. You will soon hear from us on this matter. Please do keep following the updates from our end on the Facebook page of LFY (<http://www.facebook.com/LinuxForYou>).

Hope this helps. Do let us know if you have any other query.

Request for Backtrack and DVDs in the 64-bit format

I have been reading LFY for the last three years. The CD and DVD provided along with the magazine are quite useful. Can you please provide the Backtrack 4 R2 DVD in one of the forthcoming editions? I am anxiously looking forward to this.

Waiting for your reply and thanks in advance!

ED: We have conveyed your request to our CD/DVD theme. You can expect your favourite distro in one of the forthcoming issues.

I have just received my subscriber's copy of LFY for the month of March 2011. You people are really doing well, but I have a concern to share.

The LFY February 2011 edition was my first subscribed copy. It was a wonderful experience for me and my family to see my posting 'Regarding distros and DVDs' under the 'You Said It' section on Page 10. I had requested that the distro DVD bundled with the magazine should be based on the 64-bit format, to which you had said that you would consider doing so.

But I was disappointed to see the Debian GNU/LINUX version 6.0 provided with the March 2011 issue in the 32-bit format. Is it really impossible to deliver Linux distros in the 64-bit format? If so, then you should have mentioned that in your reply to my request in the February 2011 issue.

ED: We welcome your suggestions and appreciate the way you have shared your concern. While we have conveyed your suggestion to the CD/DVD team, they are evaluating the feasibility of bundling the distros in 64-bit format. What makes us opt for the 32-bit format is that even those users whose hardware is not of the recent configurations are able to make use of the DVD. Our survey reveals that there are many users who are still working on older machines, with modest configurations.

We are sure you will agree that while people working on the

latest hardware configurations can still make use of the 32-bit format, those with the older configurations can't do so if the 64-bit distros are shipped. So, it is for the benefit of the larger audience that we have opted for the 32-bit format. However, like I said, the team is evaluating a way forward and will soon come up with a feasible solution for those waiting for the distros in the 64-bit format. Kindly allow us a little time.

Please do feel free to reach out to us in case you have any other query/concern. We will be happy to address it.

A tech query

 Can you please explain how can I create a dynamic dropdown menu in a search engine?
