

Document Foundation collects € 50,000 in eight days

With around 2,000 donors contributing funds from all over the world, the Document Foundation recently reached its fund-raising target of €50,000 in just eight days. The money will serve as the capital stock necessary to set up the Foundation as a standalone legal entity (called 'Stiftung') in Germany. "We still can't believe it," says Florian Effenberger, a steering committee member of the Document Foundation. "It happened in such a short period of time and was beyond our wildest expectations. You all really rock! On behalf of the community, the steering committee would like to thank all the donors for their generous support."

The group said it sought ongoing donations to bankroll costs "...for things such as marketing, hardware, infrastructure, attending trade shows, initial financing of merchandising material and, of course, developing new and exciting ideas."

Android Market now selling e-books

The Web-based version of the Android Market has begun to display e-books—a sign that music and movies are the next dominoes to fall. The navigation now has a 'Books' tab sitting next to an 'Android Apps' tab.

The e-books in the online market are easy to find—clicking on the results will get you a large splash page with images, information and user controls. Although the new offering is not available on the mobile version of Android Market, it is expected to arrive soon.

Ning releases Galaxy as open source

Ning, the social website platform, has open-sourced Galaxy, its internal deployment management system. For the last four years, Galaxy has been used to manage the various services that Ning's engineering team produces. Its main components are the console, the repository and the agents.

Galaxy 3.0.0 is available for downloading from GitHub under the Apache 2.0 licence.

Intrinsyc joins Linux Foundation

The Linux Foundation has announced that Intrinsyc is its newest member. Intrinsyc, which provides software design and services that help its customers compete in today's high-stakes devices market, achieved success with the development of the first Android-based e-reader—the Barnes & Noble Nook, and has followed up with several software and services agreements to support Android mobile device development.

The company is joining the Foundation to collaborate with the community on embedded Linux development, specifically around Android and MeeGo, for devices ranging from smartphones to industrial handhelds, portable gaming devices, e-readers, media tablets, and automobile infotainment.

Red Hat defends changes to kernel source distribution

Brian Stevens, chief technology officer of Red Hat, has defended the company's changes in how it distributes the kernel source code in a blog posting. The company had changed its policy on how it distributed the source to its Linux kernel, a key
