

to break into their systems within no time. It is to be reiterated that Apple's Safari was hacked in less than five seconds at the contest.

Firefox and Chrome Web browsers were also left undefeated because contestants withdrew from Pwn2Own.

"The survival of a target at Pwn2Own does not automatically declare it safer than a target that went down," Peter Vreugdenhil, last year's Internet Explorer Pwn2Own winner, cautions. The contestants who were lined up to beat the Android and WP7 devices in the competition withdrew for a variety of reasons.

Opera introduces Web page debugger

Opera Software has ingrained into its Web browser a set of tools (beta), collectively called 'Dragonfly'. These tools can help developers find errors in their complex Web pages. Dragonfly 1.0 can be embedded in the latest version 11.1, of the Opera browser. "Dragonflies eat bugs, and that is exactly what we want [Dragonfly] to do for developers around the world," David Storey, an Opera developer and relationship manager, said.

The Opera Dragonfly can debug JavaScript code and can be used to inspect DOM (Document Object Modules), CSS (Cascading Style Sheets) and HTTP network packets. It includes a console that highlights errors, and a command line.

Is Asus' 3D tablet coming out in April?

Ever since Nvidia announced its quad-core based chip 'Kal-El' at the Mobile World Congress, there has been talk about Asus readying a cloud-computing device or a 'secret weapon' to take on the iPad. Could that be the announcement that will be made at the Milan Design Week?

Asus has sent out a tweet from @AsusUK that promises to showcase a 'Design Concept Or Innovative Display' at the upcoming Milan Design Week. Why would a technology company choose to showcase its product at a design conference? Could this be an Apple-esque approach, by which the company hopes to change its image, with 'design' at the centre of every product?

Could this also be the much talked about Quad-Core based tablet that Asus plans to release in 2011? If it previews at this event, this tablet on a Quad-Core graphic chip from Nvidia, coupled with Honeycomb and a 3D display, could be a media powerhouse!

Sullivan is new executive director at FSF

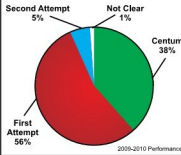

The Free Software Foundation (FSF) has appointed John Sullivan as its new executive director. The appointment follows the departure of Peter T Brown, who has stepped down from the position he took up in 2005. Sullivan, who has worked at the FSF since 2003 and has been the operations manager since 2007, said, "I'm looking forward to working closely with FSF president Richard Stallman and our board to advance the goals of the free software movement. I'm very thankful to Peter for his effective leadership in our advocacy campaigns and in our efforts to build resources for free software."

Novell acquisition delayed

Attachmate's \$2.2 billion acquisition of Novell has run into some legal snags, hinging largely on the sale of 882 patents to a Microsoft-led consortium of
