

Confidently Deploy .NET Applications on **Linux+Mono** with **Delphi Prism**

This article aims to address the main problems that developers currently endure in developing and deploying cross-platform .NET enterprise applications to the Linux platform.

Since its inception .NET has captivated developers across the world with its simplicity of development and its flexibility in deploying enterprise-class applications. Let's face it; today, Windows applications are reaching new frontiers in the software development spheres of the desktop, the Web and rich UX applications.

And these types of applications have found a new home, the Linux platform. Often, many developers have found deploying .NET apps to Linux challenging. In this short *How-To*, we will learn how to develop a .NET 4.0 RichTextPad, and deploy it to a Mono 2.8 Linux environment, without changing a single line of code.

Embarcadero Delphi Prism XE provides a cross-platform development solution and a robust programming language for rapidly developing .NET, Mono, ASP.NET and data-driven applications for Windows, Linux and Mac OS X. Delphi Prism combines an easy-to-learn syntax, based on the Delphi language, with features not available in other .NET programming languages—enabling developers to create cutting-edge applications. With Delphi Prism, you can:

- Create .NET, ASP.NET Web, and Silverlight applications.
- Build cross-platform Mono applications and deploy them on Windows, Linux and Mac OS X.
- Develop apps with a choice of IDEs, on both Windows and Mac OS X.
- Leverage your Delphi language skills with the easy-to-learn Delphi Prism language.
- Work with the latest .NET 4.0 and Visual Studio 2010 technologies.

Requirements

- You need to do a Web registration for an Embarcadero Developer Network account, which is free. Visit <https://members.embarcadero.com/newuser.aspx> to sign up. Next, download a trial copy of Delphi Prism, from https://downloads.embarcadero.com/free/delphi_prism. Click the first link, which says “Delphi Prism XE Enterprise - 30 day trial”.
- The OpenSuSe Mono 2.8 Virtual Appliance, which can be downloaded from <http://ftp.novell.com/pub/mono/appliance/2.8.1/Mono-2.8.1.iso>.
