Figure 3: Copy functionality runtime view

- VMWare/VirtualBox for hosting the Virtual Appliance.

Set-up

- Install Delphi Prism XE just like any other Windows application.
- Set up the VM—launch VMware Player/VirtualBox, and create a new OpenSUSE-based VM; boot off the Live CD ISO (*Mono-2.8.1.iso*) and then choose *Install*. The recommended configuration is to have swap space of twice your physical memory; the remaining space can be allocated to the / (root) partition.
- Once installed, reboot the VM and log in with your credentials.
- Ensure that VMWare Tools/VirtualBox Guest Additions are installed in the guest OS.

Building a simple notepad application

- Launch Delphi Prism by clicking *Start > All Programs > Delphi Prism in Visual Studio 2010*. Ensure that you run Visual Studio as an administrator.

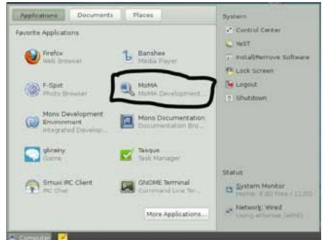

Figure 5: MoMA – Mono Migration Analyzer Application

- Click *File > New Project* and choose *Windows Forms Application (Mono)*, under the *Mono* section, as shown in Figure 1.
- From the toolbox, drag and drop the following controls onto the form:
 - MenuStrip*
 - ToolStrip*
 - StatusStrip*
 - StatusStrip*
 - ContextMenuStrip*
 - RichTextBox* control
- For the *MenuStrip* and *ToolStrip* controls, set to insert standard items.
- Dock the *RichTextBox* control.
- For the *ContextMenuStrip* menu, add *Cut*, *Copy* and *Paste* items. The final UI should resemble Figure 2.
- Add some code to implement simple *Cut*, *Copy* and *Paste* functionality:

```
[Cut Action]
```

```
method MainForm.cutToolStripMenuItem_Click(sender: System.Object; e: System.EventArgs);
```
