

Digital Forensic Analysis Using BACKTRACK

In Part 1 of this series, we saw the digital forensics capabilities of the BackTrack Live Linux distribution, and focused on the first phase of digital forensic analysis, known as image acquisition. We used a variety of image-acquiring tools, to acquire and preserve data on digital media that needed to be analysed forensically. Continuing from there, this article focuses on the BackTrack tool-set used for the subsequent phases of digital forensic investigation—data recovery and data analysis for evidence.

Part—2
