

## Sneak a peek into the brand new openSUSE 11.3

OpenSUSE 11.3 is out, packed with new features and updates, including SpiderOak to sync your files across the Internet (for free); Rosegarden for free editing of your audio files; improved indexing with Tracker; and updates to Mozilla Firefox and Thunderbird. Apart from these new features, openSUSE also provides support for netbooks and offers Btrfs file system support. Users can expect to see improved hardware support with the 2.6.34 Linux kernel, updated graphics drivers and support for the next generation of interactive computing for touchscreens like the HP TouchSmart.

*A free DVD containing OpenSUSE 11.3 is enclosed with this edition. Try it out yourselves!*

## Hadoop and Oracle make a connection through Ora-Oop

Oracle tools provider Quest Software is working closely with Cloudera's Hadoop (a software framework that supports data-intensive distributed applications under a free licence) to create a connector into Oracle for Hadoop. The connector, named Ora-Oop, enables data transfer between Oracle and Hadoop. The service will be available for download in the fourth quarter of 2010 through Cloudera and Quest. Hadoop, used by Yahoo, Facebook, etc, for efficient data management allows bi-directional transfer of information. Ora-Oop will complement Sqoop, an open source tool

designed to import data from relational databases into Hadoop. More at: <http://bit.ly/Ora-oop>

## Google-Verizon tablet to ride on Android 3.0

With Google's Android 3.0 launch expected in mid-October, speculation is rife that the upcoming Google-Verizon tablet will be powered by this latest version of the OS, codenamed Gingerbread. Apart from rendering a resolution of 1280×760, the new OS is likely to sport a powerful user interface, packed with lots of animation. Rumours about the new device include a mobile phone with a 9.67 cm (4.3 inch) display and a dual core 800 MHz processor running Android 3.0, called the HTC Vision, and a 2 GHz Android-powered phone from Motorola. More at: <http://bit.ly/verizon-android3>
