

Software		New features / Major updates	Download@
Wind River Linux 4	WIND RIVER	Based on the recently released Linux 2.6.34+ kernel, cross-compiling tool-chains GCC 4.4, EGLIBC 2.11 and GDB 7. Supports leading ARM, Intel, MIPS and Power architectures. Also on track for compliance with forthcoming Carrier Grade Linux (CGL) 5.0 standards for high availability and serviceability and Linux Standard Base (LSB) 4.0 certification requirements for application portability.	http://bit.ly/cCkBMK
OpenOffice.org 3.3.0 RC1		Features an updated, easier to use, Extension Manager user interface (UI) and a number of improvements to Calc spreadsheets, such as increasing the number of rows supported from 65,536 to 1,048,576.	http://bit.ly/5CxJol
Phusion Passenger 3.0.0		Improves performance by as much as 55% compared to the previous version. Introduces a watchdog to the architecture to ensure stability and offers zero-downtime web server restarts.	http://bit.ly/PxIKV
Ingres Database 10	INGRES	Allows customers to easily and more transparently migrate to the Ingres Database from proprietary databases by Big Software companies such as Oracle, Microsoft and Sybase. Supports multi-versioning, column encryption, partitioning and faster bulk loading.	http://bit.ly/b8r8fl
Opera 11 alpha		First Opera browser to include extensions, browser add-ons made using Opera application programming interfaces (APIs) and Web standards like HTML5 and JavaScript.	http://bit.ly/T5IO
Asterisk 1.8		Features more than 200 enhancements, including new security features, integration with IPv6 and extensive additions to ISDN-BRI functionality. Designated as a Long Term Support release, indicating four years of support from Digium.	http://bit.ly/97FHgx
SeaMonkey 2.1 Beta 1		Successor to the old Netscape Communicator and Mozilla Application suites. Includes a Web browser with advanced e-mail and newsgroup support, an IRC chat client and HTML editing support. Based on the same Gecko layout engine as the 3.6.x branch of Firefox, version 1.9.2, and features a new "Paste and Go" option in the context menu of the location bar, improved JavaScript performance using the new Jäger-Monkey engine and the Data Manager now unifies cookie, permission, password and form data management.	http://bit.ly/dtp2XD
GNOME 2.91.1		First development version of GNOME 3.0. Includes several modules that have yet to be ported to the new libnotify API and some modules "might not even run at this point".	http://bit.ly/aIS80D
Miro 3.5		Includes performance improvements and bug fixes across all platforms. Features the addition of new video conversion capabilities, including support for Apple's iPad.	http://bit.ly/9pJ9dF
Parrot 2.10.0		Features several core changes, including IPv6 detection tweaks, updates to the latest nq-rx compiler for generating PIR routines from Perl6-like code and the removal of deprecated charset ops.	http://bit.ly/a2KuhO
VLC 1.1.5		Includes various translation updates, several bug fixes and addresses a Windows only security issue. Addresses a stack smashing vulnerability in Samba access on Windows systems that could lead to the execution of arbitrary code on a victim's system.	http://bit.ly/16FYS
jQuery 1.4.4		Addresses a number of bugs found in the previous update and introduces a new animation method to Effects called .fadeToggle().	http://bit.ly/6kEUH
Blender 2.55 Beta		Addresses more than 340 bugs found in the previous development release. An "extensive renaming operation" has occurred between 2.53 and 2.55, substantially changing the scripting API and that may very likely lead to repercussions for loading 2.53.	http://bit.ly/dmE944
